Iran in talks for \$4.5-bn gas pipeline to Gujarat

Iran Monday said negotiations are underway to lay a \$4.5-billion inter-state gas pipeline to Gujarat after India shunned an oil-rich region of Iran's Turkmen gas fields.

Negotiations are under serious consideration," said an oil pipeline from Iran's gas fields in Oman Sea and Indian Ocean to Gujarat, National Iranian Gas Export Co managing director Alireza Kamali said at the World Energy Policy Summit here. The pipeline is planned to carry 3.5 million standard cubic metres per day and will be built in two years from the date of necessary approvals and a sale-and-purchase agreement being signed, he said.

NLC suffers ₹400-crore generation loss in Nov

Noyvel Lignite Corporation (NLC) on Monday said that the power PSUs has suffered ₹400 crore in power generation losses in the month of November itself. NLC operates three mines and four thermal power stations at Noyvel, to feed the thermal power station 2090 MW capacity. Inputs to tune up ₹800 million per annum is being received. "During the month of November, there was less of generation of power amounting to about ₹400 crore, besides loss to the mining equipment which are submerged in the rain water, which would add some more cost of losses, which is yet to be assessed as the rains continue," NLC said in a statement.

International flight ops begin at Chennai airport

International flight operations from the Chennai airport started on Monday. The resumption of services comes two days after floods forced shutdown of the operations, which put air travellers in a tight spot. The International flight operations have commenced at Chennai Airport from 5 am on Tuesday, according to an official release.

India talks tough ahead of Nairobi WTO talks

On the question of developed countries' insistence that the mandate of the Nairobi round of talks be expanded to include new issues to reflect today's reality in trade, the minister said India is fine with discussions initiated on some of the issues such as e-commerce, but they won't be binding commitment on them, nor should such issues be part of the draft ministerial declaration. Moreover, India would like the negotiations on services (Mode 4), which relates to the free movement of professionals, to be discussed.

Subsequent to the Bali ministerial, India managed to get a permanent peace clause against the stock holding of countries for the public distribution system as sort of quid pro quo for its support to the trade facilitation agreement (TFA), which the developed world pushed hard. A peace clause means no WTO members can drag India to the dispute panel in order to force more product-specific support for farmers through procurement or grants than stipulated under the WTO until a permanent solution to the issue is found. According to the norms, the amount of subsidy should not exceed 10% of the value of production of a commodity and in India's case, this ceiling, some members alleged, was breached in rice. While the Bali declaration sought to limit workable measures on the job losses, members have still not agreed on issues on which the workable would be concentrated.

Without adjusting for inflation, the product-specific supports for rice and wheat in 2011 were higher than the WTO mandates cap at 5% and 17.5% of the total output value, respectively. Another

critic for India is that the WTO's appellate body has ruled in 2003 that product-specific price support could be determined assuming subsidy is based on the net output. If this methodology is applied, then India's price support to rice sans inflation adjustment works out to be 75.5% of production value in 2011 and that to wheat, 65.7%. However, supporters of domestic analysis argue that the country's product-specific subsidy for rice is at 9.7% and that for wheat at 10.2% of the respective production values in 2010. It is calculated on a fully inflation-adjusted basis.

During the Doha round, a group of developing countries known as the C33 sought a policy instrument similar to the provision of special safeguard duties (SSD) enjoyed by some developed nations, in case of unusual import surges through what is known as special safeguard mechanism (SSM). In the general council division of the WTO, it was agreed that an SSM would be established, which was slightly modified in the Hong Kong ministerial declaration. However, the feasibility of imposing volume-based SSM was subsequently compromised. Still, it is considered an important policy instrument for developing countries to protect farm livelihoods from a surge in imports of agricultural products or dip in import prices. The 40% rate, which doesn't imply any hike from the present rate, could remain in the 12% protected scenario as well.

According to Podder, the fact that tax exemptions don't mean tariff and they benefit mostly the rich should be reason enough for a political consensus on removing them. The industries that are now proposed to be out of the GST like petroleum, alcohol and tobacco will not feel the pinch either as tax on outputs will enable them to avail of input tax credit. A 12% tax, Podder said, could lead to 10-15% increase in consumption which could be a sort of 'gift' of govt. for the government as it won't feel any pressure to reduce the tax rate to below 12%.

At that rate, Indian producers would increase their global competitiveness as well. A 12% GST rate will be competitive against many countries including China where the VAT is at 17%, Germany at 19% and US and France at 20%. Indonesia and Australia levy VAT at 10%, while Canada at 15% and Singapore at 12%.

Broader GST allows 12% rate, is politically feasible

CEA panel

Calling the panel's reasoning a

"breakthrough", Satya Podder, CEO & country managing partner of YRG India, then stressed India's price support to rice sans inflation adjustment works out to be 75.5% of production value in 2011 and that to wheat, 65.7%. However, supporters of domestic analysis argue that the country's product-specific subsidy for rice is at 9.7% and that for wheat at 10.2% of the respective production values in 2010. It is calculated on a fully inflation-adjusted basis.

The Subramanian panel has virtually demolished the NIPPP's revenue-neutral rate (RNR) estimate of 27% and pegged it at 18% assuming tax on previous income increases. This preferred RNR has split into an actual rate of 15.5% for most goods, 13% for merit goods and 40% for demonetisation like tobacco products, luxuries etc. The 40% rate, which doesn't imply any hike from the present rate, could remain in the 12% protected scenario as well.

46 oil & gas blocks may go under hammer

Skidha Chaitanya
New Delhi, Dec 1

Reliance is set to auction 46 oil and gas blocks in the country, including 10 blocks in the North East, 10 in the Central Sea and 26 in the Indian Ocean to private and state-owned companies.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.

Reliance is also likely to sell off its 100% stake in Reliance Infrastructure, which is involved in the construction of hydrocarbon pipelines and refineries, and sell its 50% stake in Reliance Retail.
