DIRECTORS' REPORT

TO THE MEMBERS

The Directors have pleasure in presenting the Annual Report and Audited Accounts of the Company for the eighteen months period ended 30th September, 2009.

OPERATIONS

The financial year of the Company was extended by six months thus covering eighteen months period ended 30th September, 2009. The turnover during the period was Rs. 151.27 crores. Due to adverse climatic conditions during the period there was an operating loss of Rs. 72 lacs and the Loss before Tax was Rs. 7.35 crores.

This eighteen months period comprised of two major Khariff selling seasons and one Rabi (winter) & summer season. Whilst both the rainy (Khariff) seasons were marked with fluctuating climatic conditions, the major agricultural areas in the country witnessed one of the worst droughts during Khariff, 2009. This resulted in sharp decline of sowing of major cereal crops viz. Rice, Bajra etc. Even though there was reduction in the off take of cereal crops, the Company was able to maintain a modest growth by increasing sales of other crops viz. Maize & Bt Cotton. The profitability was however affected due to resultant build up of inventories and obsolescence losses.

The recently released Maize and Bajra hybrids are delivering promising yields across the country. The Company has also launched several new hybrids in vegetable crops viz. Tomato, Chilli, Bhendi & Brinjal.

The Company has entered the energy crop sector through development of hybrids in Sweet Sorghum which are gaining acceptance and good response from farmers as also from industry.

RESEARCH AND DEVELOPMENT

The Company lays great emphasis on R&D programs. It has successfully integrated plant breeding and biotechnology based research techniques to develop superior hybrids, suitable for various markets and agro climatic segments across various geographies.

The Company focuses its research efforts on some of the major market segments which require superior products in its mandate crops. Even though your Company has the distinction of being the first Indian Company to commercialise indigenously developed Bt Cotton technology, it faces major challenges due to delay in deregulation of the second generation stacked gene Bt Cotton technology. With a view to increase the presence in the markets, the Company has developed collaborative linkages for accessing latest technology not only with several national and international institutes, but also with some of the major agri-biotech global players. This would enable the Company to incorporate latest technology traits in its present and newly developed products to fulfill the changing needs of the farmer and end consumers alike.

RESTRUCTURING

A Scheme of Arrangement and Demerger (Scheme) between JK Agri Genetics Ltd. and Florence Alumina Ltd. has been filed in the Hon'ble High Court at Calcutta for sanction thereof pursuant to Sections 391-394 of the Companies Act, 1956. The Scheme envisages transfer of Seed undertaking of the Company to Florence Alumina Ltd. with effect from the Appointed Date i.e., 1st April 2005. The Scheme was approved by the requisite majority of the equity shareholders of the said two Companies at their respective meetings held on 13th September 2006 at Kolkata under the directions of the said Court. However the impact of the Scheme will be given in the accounts only after the Scheme is sanctioned and becomes effective pursuant to Sections 391-394 of the Companies Act, 1956.

MANAGEMENT DISCUSSION AND ANALYSIS

INDUSTRY OVERVIEW

The Seed Industry has registered healthy growth during the last several years despite fluctuations in monsoon. One of the major contributing factors for this growth has been the launch of transgenic technology of Bt Cotton during 2002. Even though farmers were cautious while accepting this new technology in the initial stage, there has been rapid growth in the sale of Hybrid Bt Cotton seed since 2004-05 and almost 80% of the area under cotton has now been covered by Bt Cotton hybrids. Even within this segment, rapid acceptance of latest technologies with value added traits (stacked gene products) by the farmers has been remarkable. The increased consumption of Bt Cotton hybrid seeds coupled with high price has resulted in a compounded growth of 25% in case of Bt Cotton and 10% overall growth in the seed industry.

The other driver of growth has been Hybrid Maize wherein the consumption has almost tripled and the seed value has been increased by more than 7 times which works out to 35% compounded annual growth rate over 7 years period. The major reasons for this are better price realisation for the Maize grain, and higher productivity obtained by the farmers by single cross maize hybrids. Apart from this, there has been moderate growth in few other hybrid crops viz. Rice, Bajra and some of the Vegetable crops, during this period.

This clearly indicates the eagerness of farmers to adopt new technologies, experiment with new innovative hybrids in order to improve their productivity and income levels. The Seed industry accordingly has been making heavy investments in R&D, Biotechnology, Processing Plants and other infrastructural facilities, to offer world class products to Indian farmers at reasonable prices. The trend is expected to continue with more and more crops getting approved under GM crops category. The recent clearance of Bt Brinjal by the Genetic Engineering Approval Committee (GEAC) is likely to pave the way for entry of several GM food crops in the years to come. It is expected to fuel further growth of seed industry.

The Indian Seed Industry which has reached a turnover level of 1.2 billion USD (Rs.5500 crores) is 6th largest in the world and is growing at 10-12%, even though there are large areas where farmers are using their own seeds. Therefore, the potential in this sector is large.

Despite this growth, there were some setbacks because of peculiar situation faced during Kharif, 2009 season. The country witnessed one of the severest droughts of the last few decades, which resulted in steep reduction in the areas of some of the crops like Bajra & Rice. This was followed by floods in the later part of the season. The Rabi season is expected to be good as a result of improved availability of water due to late rains and floods.

JK SEEDS

After three years of commercialisation of the Bt Cotton technology, the Company has now received event based clearance from GEAC wherein the process of launch of the new Bt Cotton hybrids has been simplified and made almost similar to that of non-transgenic products. As a result of which, the Company could launch several new innovative Bt Cotton hybrids during 2009. The Company has now got complete portfolio of products to meet the needs of all the major market segments in Bt Cotton.

The Company has successfully developed a maize hybrid which has been well appreciated by the farmers across the country. The Company has also achieved market leadership in Jowar and has further consolidated its position in Bajra. JK Seeds has extended its distribution channels to cover almost all the geographies of Indian markets and has now initiated the exports to several adjoining and Asian countries which are having similar agro-climatic conditions like India.

RESEARCH & DEVELOPMENT

Research & Development and Innovation would play key role in driving the success of a seed enterprise worldwide. Almost all the MNCs who have heavily invested in research have entered India. To meet increasing competition Indian companies are gearing up by investing in R&D and other infrastructural facilities.

At JK Agri Genetics, R&D has always been a major thrust area since its inception. The Company has several well spread out breeding and multi-location trial centres, across the country with the obective to cover all the major agro-climatic zones.

The Company has also initiated line development programs at its breeding centres in order to develop

novel plant types in different crops. This is expected to give strategic advantage to the Company in the long run.

The breeding programs are complemented by biotechnology based research program by developing an in depth understanding of effect of various contributing genes to the diverse traits related to disease, insect resistance, drought tolerance, yield enhancement and quality related factors etc.

OPPORTUNITIES, THREATS AND CONCERNS

In the predominant agricultural country like India which has diversity of climates and soils for production of various agricultural crops comprising of food, feed, fiber and oil/fuel crops, the major challenge is improving crop productivity which will not only enhance farmer income, but also give competitive advantage to the Indian agriculture. The present level of low yields in agriculture offers tremendous opportunity for yield improvement by using good quality hybrid seeds coupled with GM technologies. There is an opportunity to accelerate growth in the farming sector which has remained stagnant for over past two decades. However, several other factors like floods, drought and macro economic factors like demand and supply of end products will have an impact on this industry. The low entry barrier, entry of several MNCs from across the globe into this market are also major challenges.

HUMAN RESOURCE DEVELOPMENT

During the year a number of key HR initiatives were taken up to link business objectives with employee performance. Developing CFTs (Cross Functional Teams) helped better understand employee potentials. It also provides directions for Job Rotations, Job Enlargement and motivating employees by internal recruitments/promotions & Career development.

Development of Online Portal for all interested candidates willing to join JKAL resulted in reduction of recruitment cost & enhanced our Brand Name in the Industry. The Company continues to invest not only in intensive technical training but also by exposing its people to leadership programmes.

Innovative products, superior quality and value added services were key differentiators, which helped in achieving this turnover. However, higher seed procurement cost, reduced demand of Bajra impacted profitability for the year under reference.

Internal Control Systems have been the strength of the Company and it has paid rich dividends in the form of system driven processes and achievement of optimum operational efficiency. Periodic review of internal control systems by internal Auditors and Senior Management has further reinforced the systems. All this has entailed heavy establishment expenses in terms of research & development expenses.

In view of the aforesaid and very high expenditure on research & development, without commensurate return in the initial period, the Company has incurred loss. - Innovative products in major crop segments, offering superior value proposition to customers.
- Incorporating latest technology traits in its products.
- Increased emphasis on Rabi (winter) and summer crops markets and vegetable seed segments to counter the risks of vagaries of monsoon.

All these initiatives are expected to lead to much improved performance, after the initial phase of consolidation of research products is over.
