3

1   Introduction

As an Exchange Participant, you have a range of alternatives to connect to our markets. BSE Exchange interfaces offer hardware independence, high levels of customization and flexibility. Our portfolio of connectivity alternatives is designed to meet the needs of a variety of users, from low-latency program trading users to cliental trading business models. With this broad offering, you can select which connectivity solution best suits your individual needs. Every business user has different needs, we designed a customized approach to ensure that you can choose the connectivity alternatives based on your unique business needs.

The sections below describe the Interactive interface and various market data interfaces that is offered to the market participants.

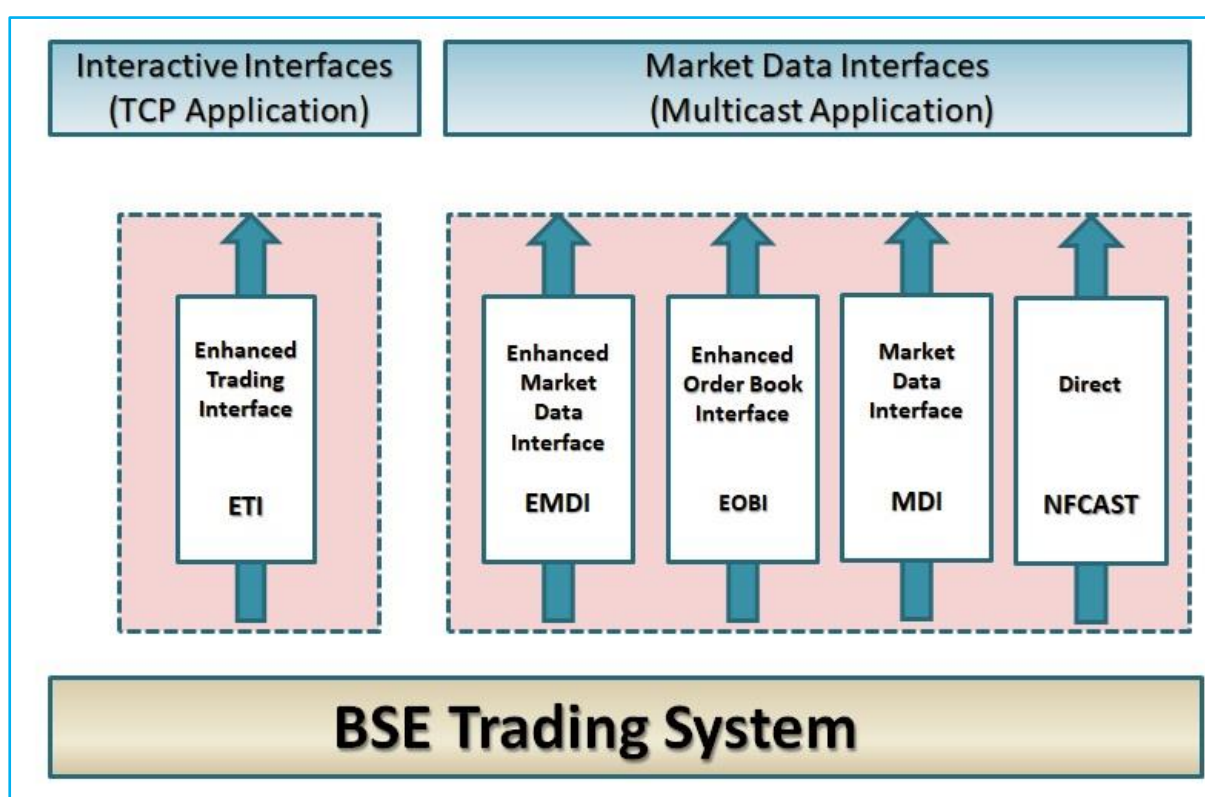

Figure 1: Trading Interface landscape

2   Interactive Interfaces

BSE offers only one interactive interface to connect to BOLTPLUS system. The interface is platform independent and offers wide flexibility in terms of implementation. **The legacy IML interface supported by exchange is discontinued.**

2.1 BSE Enhanced Trading Interface (BSE ETI)

The BSE ETI is the high-performance, low-latency trading interface designed for Participants that require optimal performance and customization. This interface supports full trading functionality, drop copy and risk alerts. The communication supported in this interface is in binary format.

The ETI is an asynchronous message-based interface. A connection between participants and exchange is established via a TCP/IP connection. The interface is session oriented. A session is established between the participants' machine and ETI gateway.

In order to establish a session with a trading gateway, a TCP/IP connection to a connection gateway must be established first. The connection gateway provides the connection parameters for the assigned primary and secondary gateway to be used for trading purposes. The connectivity to exchange is a 3-step process and the process is described below

Step 1

Request for the assigned gateway

- Open a TCP/IP session to connection gateway (IP and port provided by exchange)

- Request for the assigned primary and secondary gateway using Connection Gateway Request. Close the socket once primary and secondary gateway are received in connection gateway response

Step 2

Session logon Request

- Establish TCP/IP session to assigned gateway (Gateway IP and ports received in the Connection Gateway Response message within 120 seconds after connection gateway response is received

- First message to be sent by participant on TCP/IP session is Session logon Request with session ID and password.

Step 3

Trader logon Request

- Send User Logon request for authentication of user.

- A ETI session may be shared by multiple users of the same business unit.
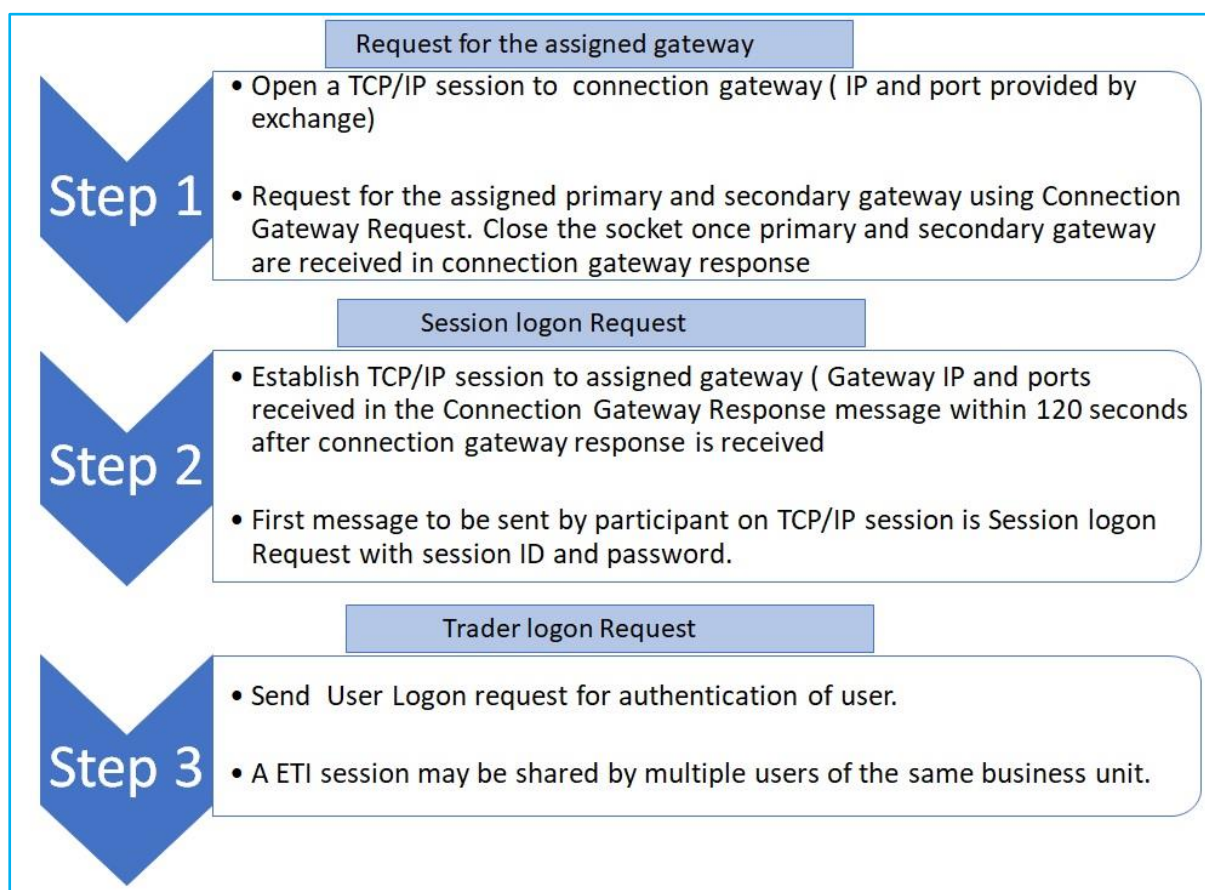

Figure 2: The TCP/IP connection flow of ETI connection

The gateway infrastructure of BSE is built redundantly with set of gateways including a connection gateway, trading gateways for low frequency (LF) sessions and trading gateways for high frequency (HF) sessions.

For each Session ID a pair of primary and secondary gateway remains constant every day. The pair of gateways are provided to each session in the Connection Gateway Response message. Though the pair remains constant the member application cannot directly connect to primary or secondary gateway. The first connection is mandatorily required to be made to the connection gateway IP published by the exchange.

The pair of primary and secondary gateway may remain constant however periodically, exchange does redistribution of connections on gateways based on the load thus the pair of primary and secondary gateway may or may not change after redistribution.

It is highly recommended that the provision for all gateways are made in member network based on the routes provided in the range provided in the section Routes

3   Market Data Streams

BSE support broadly two category of market data interfaces which are designed for low bandwidth client and high bandwidth clients.

3.1   Low Bandwidth Interfaces

The low bandwidth interfaces include market data interfaces whose bandwidth consumption is capped by exchange to less than 2MBPS. These interfaces provide netted price level data only. They include the following interfaces

3.1.1   BSE Market Data Interface (MDI)

This interface provides netted price level aggregated market data using multicast technology. The data is in FAST FIX format. The data for all partitions are provided on same feed.

3.1.2   BSE Direct NFCAST

This interface provides netted price level aggregated market data using multicast technology. The data is in proprietary binary format. The data for all partitions are provided on same feed.

3.2   High Bandwidth Interfaces

The high bandwidth interfaces include market data interfaces whose bandwidth consumption is not capped by exchange and it varies from 10 MBPS to 200 MBPS. The feeds are provided partition wise. Each partition will be sent on one set of feed only. These interfaces provide un-netted price level data. They include the following interfaces

3.2.1   BSE Enhanced Market Data Interface (EMDI)

This interface provides un-netted price level aggregated market data using multicast technology. The un-netted data is for a defined price level only. The data is in FAST FIX format.

3.2.2 BSE Enhanced Order Book Interface (EOBI)

This interface provides every visible order in the order book i.e., tick by tick update is sent in this stream of market data. Most of the functional concepts are like EMDI, however the data is sent in the proprietary binary format.

3.3 Reference Data Interface

3.3.1 BSE Reference Data Interface (RDI)

This interface provides reference data or the master through multicast channel. The data is continuously published on the channel throughout the day. The reference data is also provided through master data file at EOD.

3.4 Comparison Between market data streams:

Attributes	EOBI	EMDI	MDI	Direct NFCAST
Price Level	Full depth	Depth up to configured level (5 Level)	Depth up to configured level (5 Level)	5 level
Price level Aggregation	Every tick is sent as individual update	Unnetted but price level aggregated	Netted Price level aggregated	Netted Price level aggregated
Format	Binary	FAST	FAST	Binary
Bandwidth	High (Approx. 230 MBPS)	High (Approx. 50 MBPS)	Low (Approx. 2.5 MBPS)	Low (Approx. 2.5 MBPS)
Usage	Algorithmic trading	Algorithmic trading	Used for Terminal based trading application	Used for Terminal based trading application
Recovery	The current pending order book is replayed & should be read again to build the book	The current snapshot up to the configured level is replayed in a separate stream and should be used in case of missed packets	The current snapshot up to the configured level is replayed at regular interval and should be used in case of missed packets	Every update sent is a complete snapshot of 5 level order book, so no separate recovery is required
Availability	Only in BSE Colocation	All networks	All networks	All networks
Composition	Partition wise feed	Partition wise feed	Single feed for all partitions	Single feed for all partitions.

4   Routes

In order to have network reachability to each of the connectivity described in the document, necessary routes need to be configured in the client network. Below the routes recommended by exchange to be configured in the client network.

4.1   Routes

Segment	Primary Site	DR site	Simulation
EQUITY	Interactive 10.255.255.1/24 Port: 12906 to 12920 Port: 15906 to 15920 Market Data 137.75.1.1/16	Interactive 10.255.241.1/24 Port: 12906 to 12920 Market Data 137.75.1.1/16	Interactive 10.255.254.1/24 Port: 12406 to 12420 Market Data 137.74.1.1/16
EQUITY DERIVATIVES	Interactive 10.255.255.1/24 Port: 15906 to 15920 Port: 15906 to 15920 Market Data 137.75.1.1/16	Interactive 10.255.241.1/24 Port: 15906 to 15920 Market Data 137.75.1.1/16	Interactive 10.255.254.1/24 Port: 11406 to 11420 Market Data 137.74.1.1/16
EQUITY SHORTAGE AUCTION	10.1.101.36 Port: 1001	10.1.101.194 Port:1001	10.1.101.105 Port:1000
CURRENCY DERIVATIVES	Interactive 10.255.255.1/24 Port: 10906 to 10920 Market Data	Interactive 10.255.241.1/24 Port: 10906 to 10920 Market Data	Interactive 10.255.254.1/24 Port: 10406 to 10420 Market Data

	137.75.1.1/16	137.75.1.1/16	137.75.1.1/16
COMMODITY DERIVATIVES & ELECTRONIC GOLD RECIPTS (EGR)	Interactive 10.255.255.1/26 Port: 14906 to 14920 Market Data 137.75.1.1/16	Interactive 10.255.241.1/26 Port: 14906 to 14920 Market Data 137.75.1.1/16	Interactive 10.255.254.1/26 Port: 15406 to 15420 Market Data 137.75.1.1/16
Additional Route for members having servers in BSE Colocation	Interactive 10.255.253.1/24 Port: 15906 to 15920 Port: 10906 to 10920 Port: 14906 to 14920 Port: 12906 to 12920 Market Data 10.255.225.1/24	Not applicable	Not applicable

It is highly recommended that the client should allow the above-mentioned routes in their network. The subnet is kept wide enough to provision any new server in future that will be incorporated in the exchange farm without impacting the settings done at client side. Also note that the exchange may add a new server in the defined range without prior intimation as well.

5   Connection Parameters

The Various Connection parameter for Interactive and market data feed is mentioned below. The Below section provides all the parameters associated with trading and various set-up such Production, Simulation and Disaster Recovery.

5.1 Production: Equity

6   Change Log

Sr. No.	Version	Date	Description
1.	1.0	25th September 2020	Original Document
2.	1.1	13th November 2021	New Multicast IP 227.0.0.17 and 227.0.0.18 added for Equity Derivative segment in MDI Feed.
3.	1.2	1st April 2022	Production: New Multicast IP 228.0.0.21 added for EGR in commodities derivatives segment. Simulation: New Multicast IP 226.1.1.2 added for EGR in commodities derivatives segment. Simulation Secondary Connection Gateway IP changed as follows for all segments {table below} | OLD IP	New IP
10.255.254.7	10.255.254.40	
4	1.3	16th May 2023	The Generic route section is removed The section Specific routes renamed as Routes and range of each route updated.
5	1.4	10th July 2023	Partition 5 and 6 multicast Ip ports added for EOBI and EMDI in equity and equity derivatives segment in production, simulation, and Disaster Recovery
6	1.5	10th August 2023	Partition 7 and 8 multicast Ip ports added for EOBI and EMDI in equity and equity derivatives segment in production, simulation, and Disaster Recovery
7	1.6	10th October 2023	Segregation of equity and equity derivatives segment. Changes in following sections (a) Section 4.1 Routes: Routes added for equity derivatives segment. (b) Section 5.3 Production: Equity Derivatives Section 5.6 Disaster Recovery: Equity Derivatives Section 5.10: Simulation: Equity Derivatives

			New sections added for IP ports of equity derivatives segment in Production, DR and Simulation. Multicast IP and ports change in production and DR for Commodities derivatives and EGR segment. Section 5.4 and section 5.8
