Subject: Intimation pursuant to Regulation 30 of the SEBI (LODR) Regulations, 2015 regarding Launch of New Product

Dear Sir/Madam,

Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, this is to inform you that the Company has announced the launching of its new products available for sale from November 21, 2024.

The details of the said product are as follows:

a) Name of the Product	1. Cefix -O Tablets
	2. Cefix -CV Tablets
	3. Steropenam 1 gm Injection
	4. Ugmntin 1.2gm Injection
	5. Ugmntin Syrup
	6. Nomoceft 1gm Injection
b) Date of Launch	November 21, 2024
c) Category of Product	Pharmaceuticals
d) Whether caters to domestic and international markets	Caters in Domestic Market

Please take the above information on record and arrange for dissemination.

Yours faithfully,

For Royal Sense Limited

Rishabh Arora
Managing Director
DIN: 09745543

[Royal Sense Limited is excited to announce the official launch of our latest Medicines,](#)

Brand Name: Cefix -O Tablets

Description:

Cefix-o is combination of Cefixime 200mg and Ofloxacin 200mg, this combination treats various bacterial infections, providing broad-spectrum coverage for respiratory, urinary, and skin infections.

Details:

Cefix-o is combination of Cefixime 200mg and Ofloxacin 200mg, this combination of Cefixime 200mg and Ofloxacin 200mg is used to treat a wide range of bacterial infections. Cefixime, a cephalosporin antibiotic, targets bacterial cell walls, making it effective against respiratory, urinary tract, and ear infections, as well as certain sexually transmitted diseases like gonorrhoea. Ofloxacin, a fluoroquinolone antibiotic, works by inhibiting bacterial DNA replication, effectively treating respiratory, urinary, skin infections, and gastrointestinal issues caused by bacteria. When used together, this combination enhances antibacterial coverage, especially for infections caused by multiple types of bacteria. The combination is typically prescribed when single-agent therapy may not be sufficient, and it should be taken under medical supervision to avoid side effects like gastrointestinal disturbances, dizziness, or the development of antibiotic resistance.

Brand Name: Cefix -CV Tablets

Description: Cefix-CV is the combination of Cefixime 200mg and Clavulanic Acid 125mg , this combination treats bacterial infections by enhancing Cefixime's effectiveness against beta-lactamase-producing bacteria.

Details: Cefix-CV is the combination of Cefixime 200mg and Clavulanic Acid 125mg , this combination of Cefixime 200mg and Clavulanic Acid 125mg is used to treat a variety of bacterial infections. Cefixime, a broad-spectrum cephalosporin antibiotic, works by inhibiting bacterial cell wall synthesis, making it effective against respiratory, urinary tract, and ear infections. Clavulanic Acid, a beta-lactamase inhibitor, enhances the effectiveness of Cefixime by preventing bacteria from producing beta-lactamase, an enzyme that can degrade the antibiotic, thereby allowing Cefixime to work more effectively against resistant bacteria. This combination is particularly useful for infections caused by beta-lactamase-producing organisms. The medication is prescribed for conditions such as sinusitis, bronchitis, and urinary tract infections, and should be used under medical supervision to minimize side effects and avoid antibiotic resistance.

Brand Name: Steropenam 1 gm Injection

Details: Steropenam 1 gm injection having ingredients Meropenem 1g injection is a broad-spectrum antibiotic used to treat severe bacterial infections, effective against both Gram-positive and Gram-negative bacteria.

Description: Steropenam 1gm injection is Meropenem 1g injection is a broad-spectrum antibiotic in the carbapenem class, used to treat severe bacterial infections. It works by inhibiting bacterial cell wall synthesis, ultimately leading to the death of the bacteria. Meropenem is highly effective against a wide range of both Gram-positive and Gram-negative bacteria, including multi-drug resistant strains. It is commonly prescribed for serious infections such as pneumonia, meningitis, intra-abdominal infections, urinary tract infections, skin and soft tissue infections, and sepsis. Meropenem is typically administered intravenously in a hospital setting due to its potency and the need for careful monitoring. It is generally well-tolerated, though side effects can include nausea, rash, and potential effects on kidney function. It should be used only under medical supervision to prevent resistance.

Brand Name: Ugmntin 1.2gm Injection

Details: Ugmntin 1.2gm Injection is combination of Amoxicillin 1000mg and Clavulanic Acid 200mg injection treats bacterial infections, enhancing Amoxicillin's effectiveness against beta-lactamase-producing resistant bacteria.

Description: Ugmntin 1.2gm Injection is combination of combination of Amoxicillin 1000mg and Clavulanic Acid 200mg in injection form is used to treat a wide range of bacterial infections. Amoxicillin is a broad-spectrum penicillin antibiotic that works by inhibiting bacterial cell wall synthesis, effective against many Gram-positive and Gram-negative bacteria. Clavulanic Acid is a beta-lactamase inhibitor that prevents certain bacteria from breaking down Amoxicillin, enhancing its effectiveness against beta-lactamase-producing resistant strains. This combination is commonly used for infections such as pneumonia, urinary tract infections, intra-abdominal infections, skin and soft tissue infections, and respiratory tract infections. The injection is typically administered intravenously in a hospital setting, and it should be used under medical supervision to minimize risks, including allergic reactions or kidney-related side effects.

Brand Name: Ugmntin Syrup

Details: Ugmntin Syrup is combination of Amoxicillin 200mg and Clavulanic Acid 28.5mg syrup treats bacterial infections, enhancing Amoxicillin's effectiveness against beta-lactamase-producing resistant bacteria.

Description: Ugmntin Syrup is combination of combination of Amoxicillin 200mg and Clavulanic Acid 28.5mg in syrup form is used to treat a variety of bacterial infections. Amoxicillin, a penicillin-class antibiotic, works by inhibiting bacterial cell wall synthesis, making it effective against a broad range of Gram-positive and Gram-negative bacteria. Clavulanic Acid is a beta-lactamase inhibitor that prevents certain bacteria from producing an enzyme (beta-lactamase) that would otherwise break down Amoxicillin, thus enhancing its effectiveness, particularly against resistant strains. This combination is commonly prescribed for infections such as respiratory tract infections, urinary tract

infections, ear infections, and sinusitis. The syrup form is suitable for children or individuals who have difficulty swallowing tablets. It should be taken under a healthcare provider's guidance to minimize side effects and prevent resistance.

Brand Name: Nomoceft 1gm Injection

Details: Nomoceft 1gm Injection having ingredients Ceftriaxone 1g injection is a broad-spectrum antibiotic used to treat severe bacterial infections, effective against both Gram-positive and Gram-negative bacteria.

Description: Nomoceft 1gm Injection having ingredients Ceftriaxone 1g injection is a broad-spectrum cephalosporin antibiotic used to treat a wide range of bacterial infections. It works by inhibiting bacterial cell wall synthesis, leading to bacterial death. Ceftriaxone is effective against both Gram-positive and Gram-negative bacteria, including infections such as pneumonia, meningitis, urinary tract infections, bloodstream infections, skin infections, and gonorrhoea. The injection is typically administered intravenously or intramuscularly in a hospital setting under medical supervision, particularly for severe infections or those requiring high-dose therapy. Common side effects include pain at the injection site, allergic reactions, gastrointestinal issues, and, rarely, kidney or liver dysfunction. It is essential to complete the full course of treatment to prevent the development of antibiotic resistance.

Brand Name: Stergimox 500 Capsules

Details: Stergimox 500 Capsules having ingredients Amoxicillin 500mg capsules are used to treat bacterial infections, effective against a wide range of Gram-positive and Gram-negative bacteria.

ROYAL SENSE LIMITED

Registered Office: Plot No. 57, First Floor, Phase-II Badli, Industrial Estate, Badli Ind., Badli (North West Delhi), Delhi-110042

CIN: U21006DL2023PLC412051 **Email:** compliance@royalsense.in

Website: www.royalsense.in | **Contact No.:** +91-9205843102

Description: Stergimox 500 Capsules having ingredients Amoxicillin 500mg capsules are a commonly prescribed antibiotic used to treat a variety of bacterial infections. It belongs to the penicillin class of antibiotics and works by inhibiting the synthesis of bacterial cell walls, which ultimately leads to the destruction of the bacteria. Amoxicillin is effective against a wide range of Gram-positive and Gram-negative bacteria, making it useful for treating conditions such as respiratory infections (like pneumonia and bronchitis), urinary tract infections, ear infections, and skin infections. It is typically taken orally, and the dosage depends on the severity of the infection and the patient's health condition. Common side effects include nausea, diarrhea, and allergic reactions. It is important to complete the full prescribed course to prevent antibiotic resistance.

About US: Royal Sense Limited stands as a beacon of innovation and excellence in the healthcare industry, specializing in medical device and pharmaceutical trading. Established in April 2023, our commitment is unwavering, aiming to provide cutting-edge solutions, superior products, and exceptional service to meet the evolving needs of healthcare professionals and patients globally.
