Renewables

India: Renewable Growth Opportunity & Adani Green Energy Limited (AGEL): Company Profile

India power demand growing faster than historical growth rates

➤ Power Demand to grow @ 6-7% CAGR with projected peak demand of 350+ GW in FY-30

➤ Factors driving electricity demand

- GDP growth
- Manufacturing Demand
- Urbanization
- Electrification
- Consumer goods penetration
- Railway electrification

Robust RE growth so far but much more needed to match the demand growth

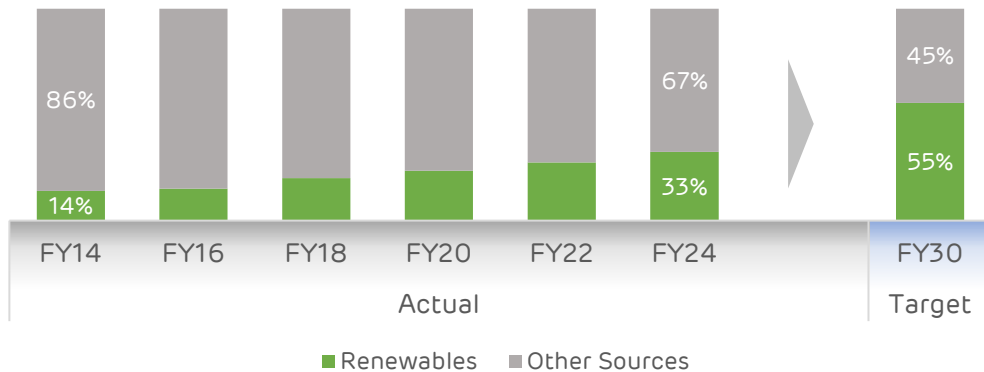

Total Installed Power Capacity (GW)

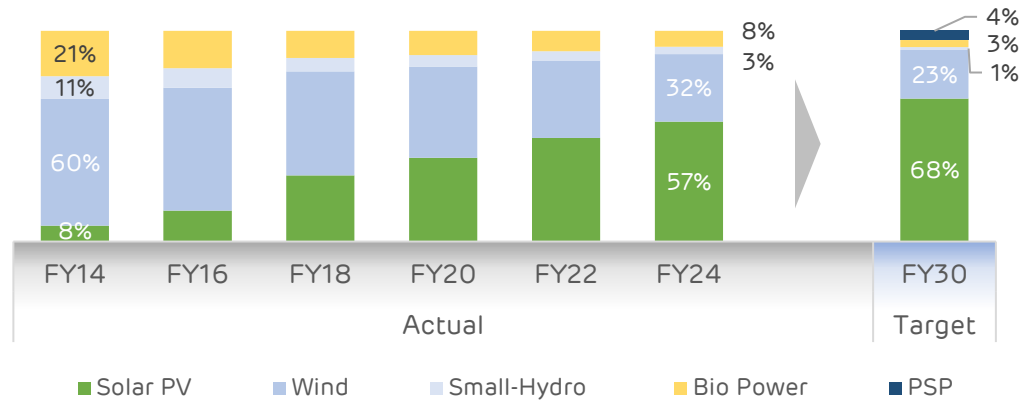

Total Renewable Capacity (GW)

Installed Capacity Mix (%)

Renewable energy capacity mix (%)

Solar capacity addition of 35 GW & Wind capacity addition of 9 GW per annum required to reach 2030 targets

Massive push for Growth of Renewable Energy in India

<p>Govt commitment</p>	<ul style="list-style-type: none"> • Nation's commitment to reaching 500 GW non-fossil power capacity by 2030 • Supporting regulations in form of ISTS Waiver, Green Open Access, RPO/RGO, Hydro & storage push • MNRE targeting RE bids worth 50 GW/year over next 5 years
<p>Storage solutions</p>	<ul style="list-style-type: none"> • Promoting battery storage by providing VGF support • ISTS charges waived for Hydro PSP until FY30
<p>Lowest cost source of power</p>	<ul style="list-style-type: none"> • Renewables are the cheapest source of power in the country and demand is driven by the lower cost and not just decarbonization goals (APPC – Rs.3.85/kWh; Latest Solar tariff discovered – Rs. 2.6/kWh)
<p>C&I demand</p>	<ul style="list-style-type: none"> • Apart from lower cost of renewables, C&I demand will be driven by and emission intensity targets stipulated by BEE for power intensive industries – iron & steel, cement, pulp & paper and petrochemicals • Further, decarbonization ambition (apart from BEE) would also provide an additional boost to the C&I demand

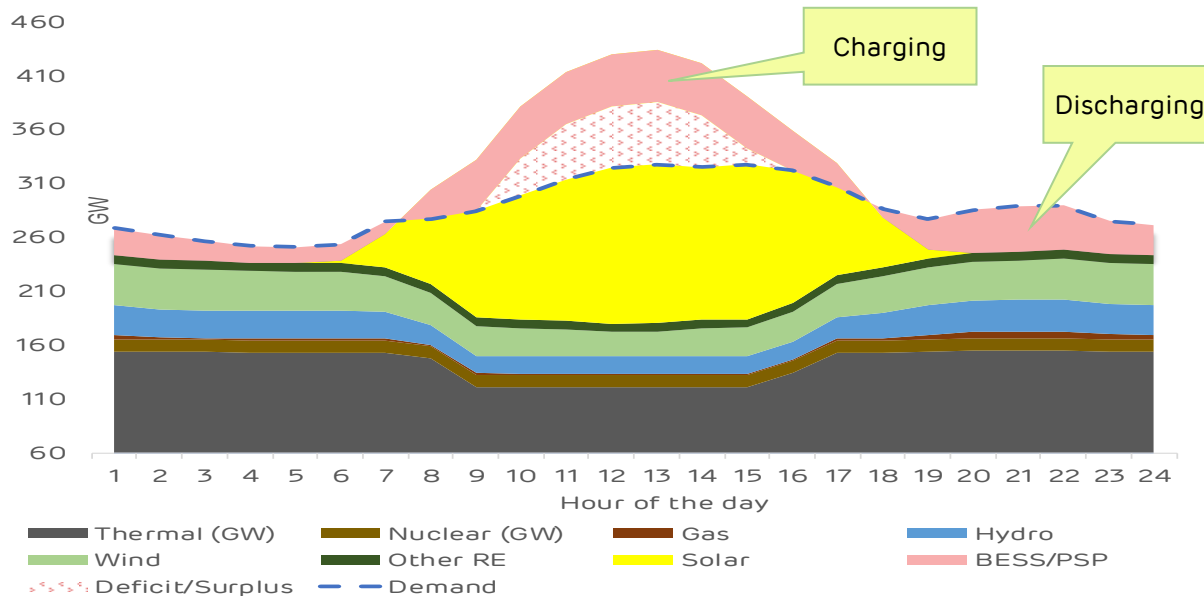

India: Shifting Peak Power Demand

Policy level interventions has enabled integration of solar thereby shifting the evening peak to day time

- Separation of Agriculture feeders – enabling better load management, assured power supply during off-peak hours
- Promotion of solar pumps – subsidizing solar powered irrigation
- Energy efficiency – Ujala scheme, Energy Conservation building code, smart metering

Forecasted Demand & Supply Profile FY30

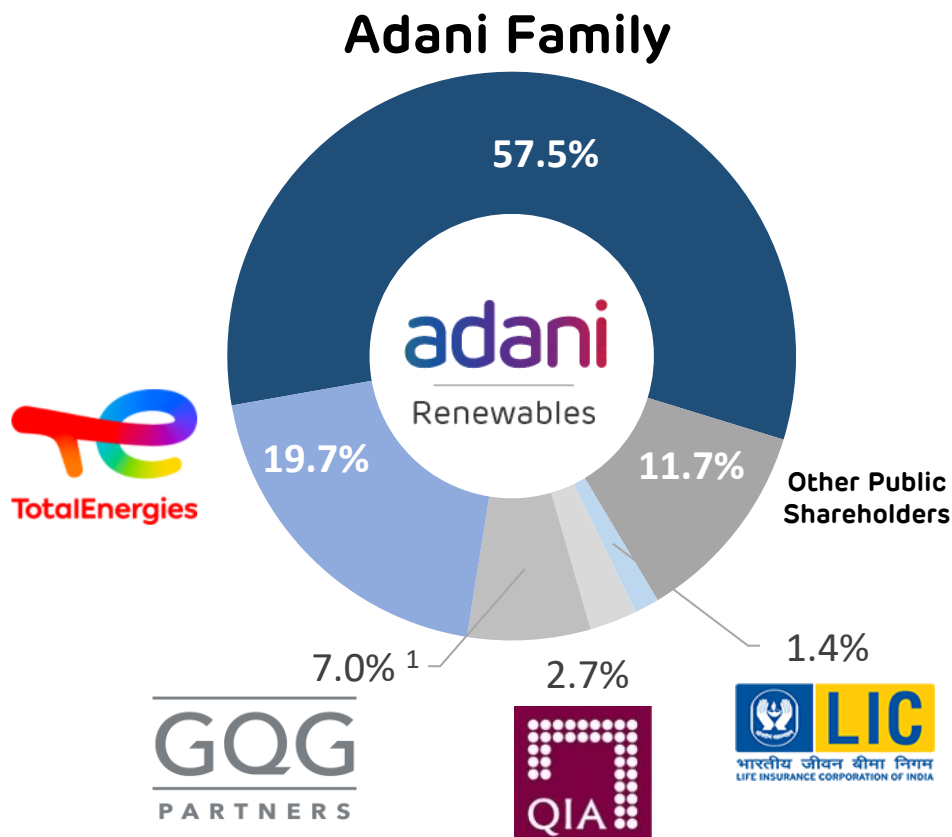

India can solve the supply-demand mismatch by:

- Power demand management - shifting power load to daytime
- Flexing thermal and hydro
- **Storage – Hydro PSP and Batteries**

As per CEA Optimal capacity mix, the demand in FY30 to be ~320 GW range, with a supply of ~380 GW. The excess supply will be used to charge **40 GW BESS and 20 GW PSP capacity by 2030**

Load curve to flatten, however significant unmet demand during non-solar hours creates a strong case for Storage
