DEVELOP OF NEW PRODUCT "KL-3200"

[Pursuant to Regulation 30 (SEBI Listing Obligations and Disclosure Requirements) Regulations, 2015]

Dear Sir/Madam,

We would like to inform that Windsor Machines Limited has launched KL3200, India's largest two-platen injection moulding machine, entirely Made in India.

Enclosed more details and same will be available on the website of the company.

Thanking you,

Yours faithfully,

For WINDSOR MACHINES LIMITED

NIKHILKUMAR VADERA
COMPANY SECRETARY

Encl.: as above

WINDSOR LAUNCHES INDIA'S LARGEST TONNAGE KL-3200 TWO PLATEN INJECTION MOULDING MACHINE MADE IN INDIA ABSOLUTELY.

Windsor Machines Ltd. took a monumental step forward in the Indian plastics processing industry with the launch of KL3200, India's largest two-platen injection moulding machine, *entirely Made in India*. This innovation comes at a pivotal time, as the demand for larger shot sizes and higher tonnage machines continues to grow across various industries, i.e. Automotive, white goods, Packaging, Home Appliance and many more.

With a relentless focus on innovation, Windsor Machines has consistently pushed the boundaries of what's possible in the field of plastics processing. The introduction of the KL3200 follows the successful launch of the KL1600, KL2000, and KL2300 machines, which is further expanding the company's portfolio to meet the ever-growing need for large plastic components in a compact, efficient, and cost-effective manner.

Salient features:

- Catering to the growing demand of higher tonnage machine up to 3200 ton
- 100 % Made in India
- Generous specification with multiple benefits
- Footprint reduction for the same daylight by 15-20%
- Improved reliability

- Manufacturing ease
- Assured high price-to-performance ratio

The large distance between tie-bar and platen dimension of KL-3200 enables universal utilities of different moulds and more versatility and high degree of flexibility. The optimized parts with documented element analysis help our customers achieve high strength to weight ratio, apart from ensuring lesser downtime in day-to-day operation.

Setting new standards in manufacturing excellence prior to the KL series, the Indian industry was heavily reliant on imports for high-tonnage machines and large-scale components. Windsor Machines has changed that narrative by developing advanced manufacturing capabilities within India. The KL3200, along with its predecessors, showcases Windsor's ability to nurture and elevate the Indian MSME sector, making India self-sufficient in producing world-class injection moulding machines.

Windsor's ongoing collaboration with local partners ensures that even the largest and most complex components are made in India. This has set a new standard for the Indian manufacturing ecosystem, benefiting not just the company but the entire plastics processing industry in India. The biggest and the highest parts were manufactured by our proud Partners (Suppliers) and paved the way for others to follow and benefit the industry towards making **"Atmnirbhar Bharat"**.

Looking Ahead as Windsor continues to drive innovation; the company is already working on developing more big size models, further broadening its range of high-tonnage two-platen machines. Currently the design activities of KL-4000 machine, is underway, which will further enhance the range for the two platen machines from 350 to 4000 ton. These new models are expected to continue Windsor's legacy of providing cutting-edge solutions that prioritize performance, reliability, and cost-effectiveness. We are committed to consistently transform and reinvent ourselves and our capabilities. Over the past year, we have made significant investments and reinvented the way we operate.

Windsor Machines Ltd. remains committed to leading the industry with technology-driven solutions that are aligned with the evolving needs of its customers. The KL3200 is not just a machine—it is a testament to Windsor's vision of empowering industries with advanced, reliable, and future-ready machinery, helping shape the future of India's plastics manufacturing sector. With KL3200, Windsor Machines is truly setting new benchmarks, delivering exceptional performance, and driving the Indian plastics industry towards self-reliance and global leadership.

On the anvil is a model that would range from 350-3200 ton with a better price-to-performance ratio, improved reliability and optimum performance. Meanwhile, Windsor continues to explore newer avenues of applications and developing suitable machines and technologies to stay ahead of the curve.
