MANAGEMENT DISCUSSION AND ANALYSIS REPORT

We submit herewith the "Management Discussion and Analysis Report" on the business of the Company as applicable to the extent relevant.

INDUSTRY STRUCTURE AND DEVELOPMENT

The Textile market consists of sales of textiles by entities (organizations, sole traders and partnerships) that produce fiber, yarn, threads, carpets, rugs, linens and other textile products.

The global textile market size grew from \$638.03 billion in 2023 to \$689.54 billion in 2024. The textile market is expected to grow at a compound annual growth rate (CAGR) of 8.1%.

The growth witnessed in the historical period can be ascribed to factors such as the expansion of the global population, heightened demand for man-made fibers, government initiatives supporting the textile industry, robust economic growth in emerging markets, and the implementation of restrictions on plastic usage.

The textile market size is expected to see strong growth in the next few years. It will grow to \$903.45 billion in 2028 at a compound annual growth rate (CAGR) of 7.0%. The anticipated growth in the upcoming period can be attributed to factors such as the continued increase in global population and urbanization, the rapid expansion of e-commerce, heightened expenditure on leisure activities, the growing retail penetration, increased internet accessibility and smartphone usage, and a rising preference for contactless delivery solutions. Notable trends expected in the forecast period include a shift towards adopting digital textile printing inks, a focus on utilizing non-woven fabrics, an emphasis on the use of organic fibers, a spotlight on sustainable fibers, integration of blockchain technology into manufacturing processes, adoption of digital platforms for textile supply chain management, collaboration with technology companies to design and develop smart fabrics, investment in robotics and automation, incorporation of artificial intelligence, and emphasis on partnerships and collaborations to foster innovation in product development.

The Textile Industry is facing exceptional and unprecedented challenging conditions. There is a rise of demand for low-cost products having sustainable and environment-friendly production processes. Consumers are seeking products that are made from renewable materials and from sustainable manufacturing processes. Further, rising importance of digital technology in textile products, 3D modelling and other technologies are enabling manufacturers to create more innovative and customized products while improving production efficiencies and reducing waste.

A notable trend in the textile market is the integration of artificial intelligence (AI) in textile manufacturing. Textile manufacturers are increasingly leveraging AI to enhance production processes and ensure product quality. AI is particularly employed for quality inspection in fabric manufacturing. For instance, Taxon, a textile company with production facilities in the United Kingdom, Germany, and China, introduced Proweave, a patented jacquard weaving technology in 2021. This innovative technology utilizes AI to blend various yarn thicknesses, weights, and fabric references, resulting in fabrics with unique gradients, ribs, waffles, colors, stretch, transparency, and 3D effects.

TEXTILE INDUSTRY IN INDIA- STRUCTURE AND DEVELOPMENT

India's textile sector is one of the oldest industries in Indian economy dating back several centuries. Even today, textiles sector is one of the largest contributors to India's exports. The textile industry is also labor intensive and is one of the largest employer. The textile industry has two broad segments. First, the unorganized sector consists of handloom, handicrafts and sericulture, which are operated on a small scale and through traditional tools and methods. The second is the organized sector consisting of spinning, apparel and garments segment which apply modern machinery and techniques such as economies of scale.

India accounts for good percentage of the world's production of textile fibres & yarns. Fabric production in the country rose to millions. The industry is the second largest employer after agriculture, providing employment to over millions of people directly and indirectly. The Indian Textile Industry contributes a good percentage to India's Gross Domestic Product (GDP), and overall Index of Industrial Production (IIP).

The Indian Textiles Industry has an overwhelming presence in the economic life of the country. Apart from providing one of the basic necessities of life, the textiles industry also plays a vital role through its contribution to industrial output, employment generation, and the export earnings of the Country.

OPPORTUNITIES

The most significant change in the Indian textile industry has been the advent of man-made fibres (MMF). India has successfully placed its innovative range of MMF textiles in almost all the countries across the globe. The future outlook for the Indian textile industry looks promising, buoyed by both strong domestic consumption as well as export demand. With consumerism and disposable income on the rise, the retail sector has experienced a rapid growth in the past decade.

Opportunities available to the Company in the present scenario, which can be seized for the benefit of the Company and ultimately to the stakeholders, can be summarized as under:

1. The Government of India announced a slew of wide-ranging reforms across varied sectors amidst a comprehensive package aggregating Rs. 20 lakh crore - or approximately 10% of nominal subordinated debt and equity support to MSMEs.
2. In the Union budget, a good amount has been allocated to the Ministry of Textiles in order to support various schemes covering the textile industry.
3. Capacity built over years has led to low cost of production per unit in India's textile industry; this has lent a strong competitive advantage to the country's textile exporters relative to key global peers.
4. India's growing population has been a key driver of textile consumption growth in the country.
5. Urbanization is expected to support higher growth due to change in fashion & trends.

THREATS

Based on review of the textile market situation and level of rivalry present in the domestic market, following threats might be present in the market, which can hinder growth of the revenue of the Company:

1. Intense competition between established brands and private label brands.
2. Low cost substitute products from other countries
3. Significant presence of small suppliers has reduced the bargaining power.
4. Major clothing brands have better bargaining power over textile manufacturers, as the product differentiation is low and numbers of players are high and fragmented.
