[Stergic Dengue IgG/IgM Rapid Test](#)

[Royal Sense Limited is excited to announce the official launch of our latest In Vitro Diagnostics Product, the Stergic Dengue IgG/IgM Rapid Test detects dengue virus antibodies in blood for quick diagnosis of current or past infection.](#)

Here are some details you might find in a Stergic Dengue IgG/IgM Rapid Test.

The Dengue IgG/IgM Rapid Test is a diagnostic tool used to detect antibodies against the dengue virus in blood samples. This test helps differentiate between a recent dengue infection (IgM positive) and a past infection (IgG positive). The test involves a simple procedure: a small blood sample is collected, usually via fingerstick, and then applied to a test strip or cassette. Results are typically available within 15-20 minutes. This rapid test is useful for early diagnosis in areas where dengue is prevalent and can guide appropriate treatment. However, it's important to confirm results with more specific tests or clinical evaluation, especially in cases of indeterminate or conflicting results.

About Royal Sense Limited: Royal Sense Limited is a leading provider of innovative diagnostic solutions for healthcare professionals worldwide. With a focus on quality, reliability, and accessibility, we are dedicated to improving patient care and advancing the field of medical diagnostics.
