## Annexure A

Name of the product:	The product is still awaiting a name. It features a breakthrough system and technique designed to enhance the efficiency and reliability of air compressors through dynamic capacity and demand balancing. This system incorporates advanced sensors, stabilizer valves, control algorithms, and real-time feedback mechanisms to optimize these functions. It substitutes the traditional systems that use variable frequency drives for this purpose to a greater extent. Additionally, the same system and technique can be applied to vacuum systems and blowers.
Date of launch:	Progressively Starting six months from now (approximate)
Category of the product:	An electromechanical device that dynamically improves overall compressor efficiency by enabling real time demand balancing, reduces operational costs, and extends the lifespan of the Air Compressor/Vacuum/Blower's critical components.
Whether caters to domestic/ international market:	It caters to both domestic and international markets.
Name of the countries in which the product is launched (in case of international):	It will be launched across global markets.
