

## Vama Growth Strategy

Vama, presently is in hardware (SI) System Integration for Enterprise Business, Datacenter working for Department of Space and DRDO Defense Labs, CAD/CAE Software Services working for US Companies. Vama has been exploring into IOT (Internet of things) business for the last couple of years

Vama expects to expand in IOT (Internet of things) business with the help of 5G Technology, which has Low Latency and (M2M) Machine to Machine Communication, being much faster and is almost real time like human action in our view.

The end-to-end projects in IOT (Internet of things) Business is divided as 40% hardware datacenter, 20% Sensor & Edge gateway Integration and 40% software. Vama is having experience in Data centers simultaneously working in Sensors, Edge gateway and applications.

This IOT (Internet of things) Business has high growth potential in Software and Hardware System Integration. Vama wants to explore this business in collaboration with overseas technology partners.
