Rise of non-communicable diseases in India

Coimbatore, July 11: India has a high burden of non-communicable diseases (NCDs) such as diabetes, hypertension, obesity, and dyslipidemia, a cross-sectional and population-based survey of 33,537 people aged over 20 in urban and 79,506 in rural areas across 31 states and Union Territories has found. This study also demonstrates that although all metabolic NCDs are more common in urban regions, rural areas have significantly greater prevalence rates than previously reported.

However, experts agree that NCDs are largely preventable and controllable by adopting healthier lifestyles, engaging in regular physical activity and improving dietary habits.

Almonds are a natural source of 15 essential nutrients such as healthy fats, dietary fibre, protein, vitamin E, zinc, copper, magnesium, calcium, and phosphorus, amongst others. Multiple research studies have indicated that incorporating almonds into a well-balanced diet can positively affect cardiovascular health, cholesterol reduction, blood sugar, and weight management. Additionally, almonds have satiating

properties that promote feelings of fullness, which may help to manage hunger between meals and keep cravings for unhealthy food away.

Talking about the recent increase in non-communicable diseases in India, Fitness Expert and Celebrity Master Instructor, Yasmin Karachiwala said, "It is quite alarming that in the past few years there has been a surge in health issues in the country.

Every one out of three clients I come

across report having type 2 diabetes, heart problems and many are dealing with weight-related issues. While I always stress the importance of exercise, I also recommend that everyone watch what they eat daily.

I also advise to opt for foods that are natural sources of nutrition and stay away from anything that is ultra-processed. A small yet great start could be eating a handful of almonds daily.

As for its nutritional profile, almonds are a

rich source of protein, fibre and contain healthy fats that are good for the heart. Swapping ultra-processed foods or snacks with a handful of almonds could be a good way to start your journey towards healthy living. Eating almonds regularly have more benefits than one. Not only do these nuts keep you full for a long period, but they also provide energy and support immunity. Hence, I recommend eating a handful of almonds throughout the day to ensure good health."
