Dear Sir,

Sadhana Nitro Chem Limited commenced production of its first Para Aminophenol (PAP) plant on the 7th of June, 2022.

The first ten days went towards stabilizing the plant operations.

The company takes pride to announce that plant operations have stabilized as of the 17th of June, 2022 and the company is now introducing the product into the India Pharmaceutical market.

Salient features of the PAP plant are as follows:

SNCL's Para Aminophenol is manufactured through a Hydrogen-based catalytic reduction of Nitrobenzene. This is the only the second plant of it's kind globally.

Para Aminophenol is used primarily for manufacturing of Paracetamol, the world's largest painkiller. It is also used for other applications such as aerospace, cosmetics, other pharmaceutical applications etc.

As part of the process, the plant will be producing Aniline oil and ammonium Sulphate as well, as co-products. Sales of which will also commence.

Our manufacturing process, has been certified by ICT (formerly UDCT), as clean chemistry, producing zero-effluent, where all output are either saleable products or recycled back (water) into the manufacturing process.

The PAP plant is for both, domestic consumption as well as for exports.

The company has been awarded under the Production Linked Incentive Scheme of the Department of Pharmaceuticals, Government of India.

As part of the Atmanirbhar Bharat initiative, this plant will reduce dependence on imports of Para Aminophenol, required for critical API, Paracetamol. It will also save the country Foreign Exchange.
