Wind Industry Overview

World Electricity Power Sources – 1980-2050

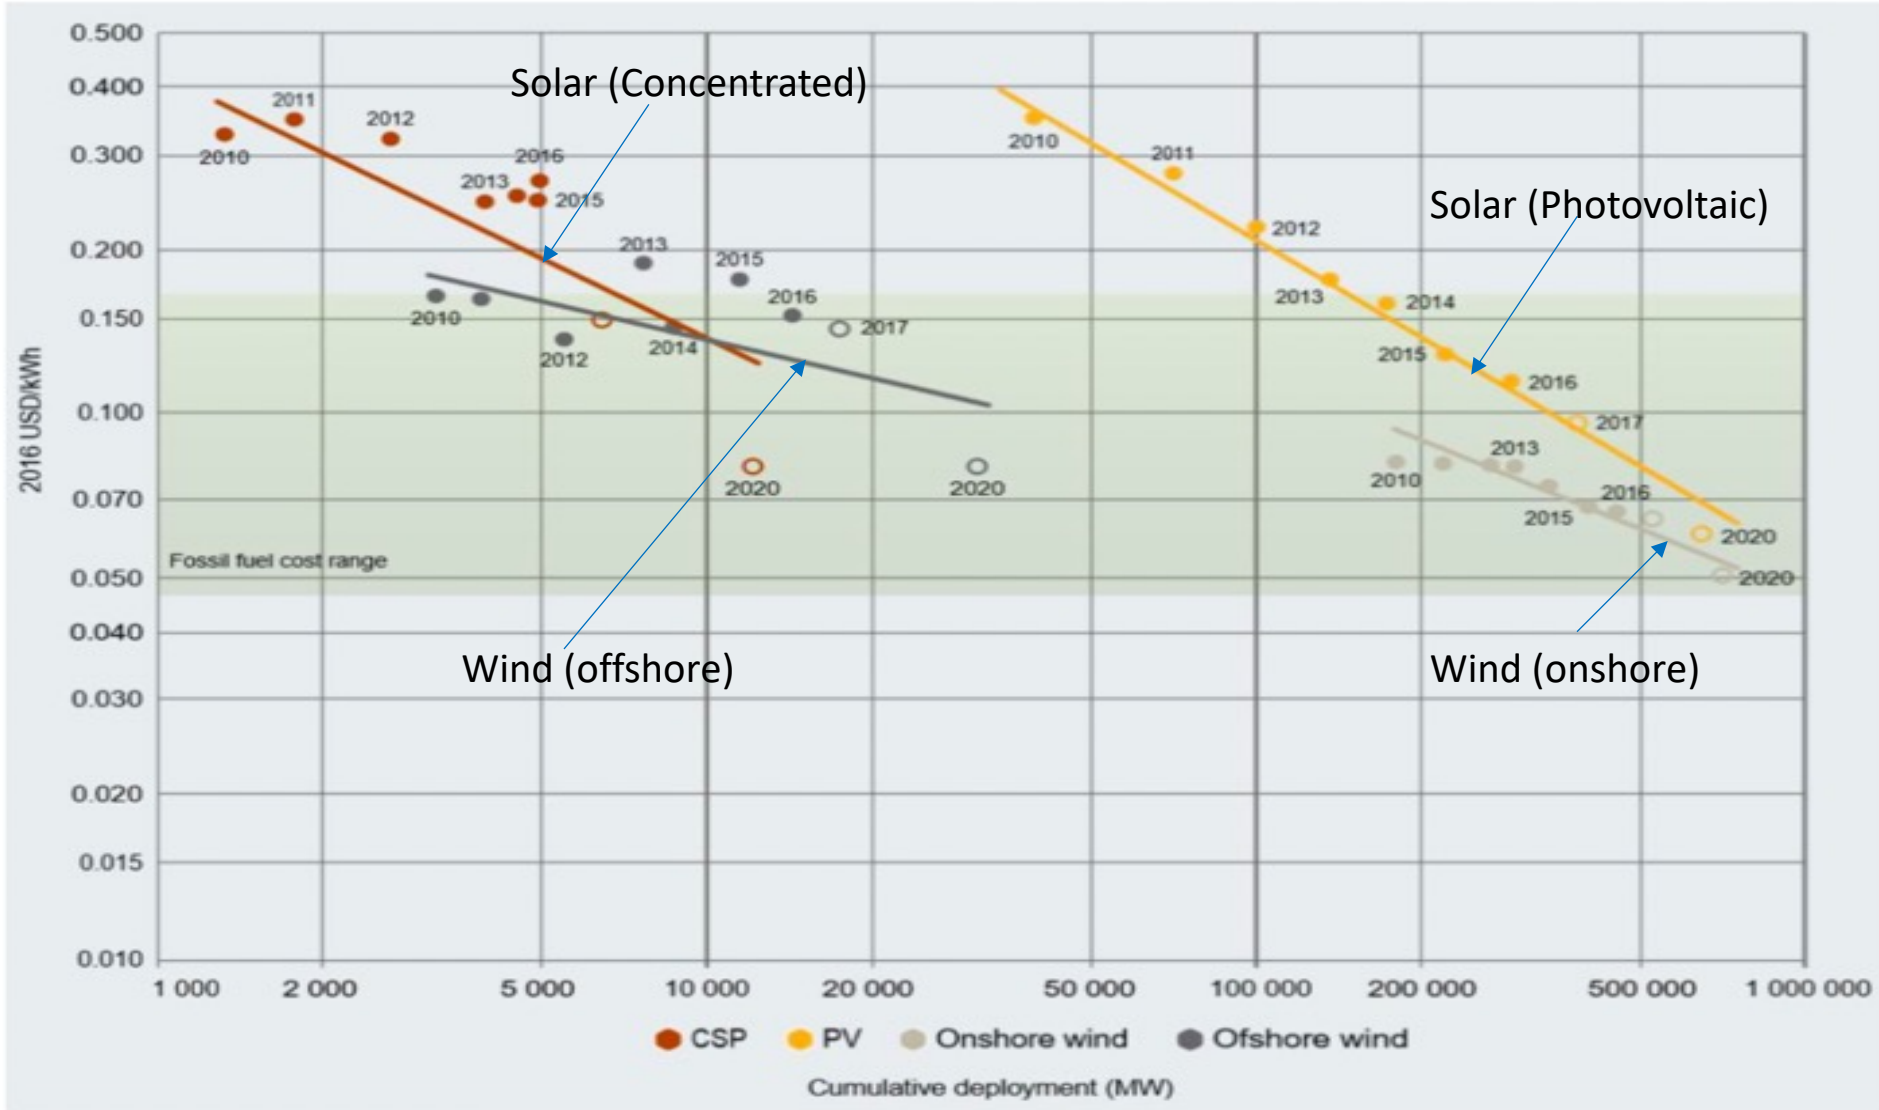

World electricity generation by power station type

Units: PWh/yr

Source: DNV.GL, 09/2018

Renewables energy is projected to attain 70% Electricity Contribution by 2050

Wind & Solar Technology Cost Comparison
 Wind Technology still holds cost competitiveness

Global Wind Installations

New installations
GW

Indian Wind Installations

Global Installations are consistent and almost doubled during 2018-20 period. Consolidation is being observed during last two years because of global issues.

Post 2017, Indian installations were hit due to local issues like reverse bidding, grid infrastructure, land bank policies and DISCOM payment delays. Gradually these issues are getting resolved and expected to improve domestic market as well.

Renewable Vs Coal Competitiveness

Global Wind Installations Outlook

Note: Wind and solar LCoE calculations done at 11% internal rate of return while coal calculations done at 16% return on equity
Does not include transmission and distribution charges for any source
Pit-head are coal plants using domestic coal and located near the mine; domestic far plants also use domestic coal but are located far from the mine (~500 km); imported fuel plants make use of imported Australian coal
