SUB: COMPLETION OF DISPATCH OF NOTICE OF POSTAL BALLOT AND NEWS PAPER ADVERTISEMENT

Dear Sir/Madam,

Intimation is given pursuant to Regulation 30 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 (Listing Regulations), that the Company has completed the dispatch of Notice of the Postal Ballot through e-mail sent by Link Intime India Private Limited on 31st March 2022 to those shareholders whose email id is registered with the Company / depositories.

Newspaper Advertisement to this effect has been published in 'Business Standard' (all editions) in English and 'eisomay' in Bengali on 1st April 2022. Copy of the advertisement is enclosed.

Thank you,

Yours faithfully

For **EIH Limited**

Company Secretary

EVs face a burning question of safety

Serial fires in green two-wheelers in a week raise questions about the regulation and safety standards of this fast-growing section of the automobile industry

SHALY SETH MOHILE & SHINE JACOB
Mumbai/Chennai, 31 March

Serial fire incidents involving Okinawa Autotech Ola S1 Pro Pure EV within a week have prompted all the stakeholders, including the government and electric vehicle (EV) makers, to swing into damage-control mode.

On Tuesday night, videos of an electric scooter model of Pune-based Pure EV, a seven-year-old EV two-wheeler maker, engulfed in flames in Chennai went viral on social media. It was the fourth such incident involving e-scooters within a week, putting in doubt the safety of battery-powered two-wheelers.

Home-grown Okinawa, meanwhile, recorded two such incidents. "It's unfortunate and it shouldn't have happened in the first place. We are seeking inputs from the companies on the reasons that could have led to the fire. We are also looking for the expert committee to submit its findings to the government," said Raji Mathai, director at Pune-based Automotive Research Association of India (ARAI), which is responsible for giving certificates of safety and roadworthiness to automobiles.

A government-appointed team that includes experts from the Indian Institute of Science (IISc) and Centre for Explosives and Environment Safety has been deputed to visit and investigate the accident sites in Vellore, Pune and Trichy. Asked whether the high recurrence of such incidents — particularly those involving models from the same companies — merit a stricter action such as a mandatory recall of vehicles, Giridhar Aramane, secretary, ministry of road transport and highways, said unless one knows the reason for the mishaps, it would be speculative to comment. "Nobody called for such actions when a popular car brand had a recall because of its model catching fire," he pointed out.

"There are two major ways an electric scooter can catch fire. One is through thermal runaway, in which a battery's cells reach a critical temperature that causes them to spontaneously catch fire. Another one is battery failure, which occurs mainly

IN THE LINE OF FIRE (All in a week)

March 25, 2022: 6-year-old Durali Verma and his daughter, Mohana Preehi, killed in Vellore after their Okinawa electric scooter reportedly catches fire in Pune

March 26: Video emerges of Ola S1 Pro electric scooter catching fire in Pune

March 28: An Okinawa electric scooter catches fire at Manappal, Trichy

March 29: Pure EV electric scooter catches fire at a toll plaza in Marjampakkam, Chennai

due to poor cell design or manufacturing flaws or even external influence.

"We are investigating the incident and will do a thorough assessment. We adhere to the highest safety standards through rigorous internal testing as well as special phase change materials being implemented in our battery packs to avoid rapid fire/burst kind of scenarios," said a statement from Pure EV, founded by Nishant Dongari and Rohit Vadera. "The company name is an acronym for Power Using Renewable Energy."

A statement from Ola likens the two incidents as "isolated" and says the matter to get to the root cause and would share updates soon. Okinawa, meanwhile, blamed the mishap on the charging process, citing it as a case of short circuit due to negligence in charging.

Though three or four incidents don't add up to a crisis, they do offer cause for pause, more so because EVs have only

GREEN QUESTIONS

Over 8X increase in the last 6 months in the percentage of consumers concerned about safety and performance of electric scooters

Like to buy but not convinced about safety and performance of electric scooters

Like to buy but not convinced about infrastructure available for electric scooters where in

Figures in %

just started gaining acceptance in India after two decades of struggle. India now has close to a million EVs (of all categories) on the roads. Overall EV sales in February 2022 bounced back to growth trajectory, clocking 15,457 units, a monthly rise of 10 per cent and year-on-year jump of 185 per cent, according to JMK Research.

But the problem has been that lucrative incentives and low entry barriers have led to an indiscriminate proliferation of manufacturers. "There are no stringent rules today on manufacturing EVs. Lower powered vehicles can be approved by ICAT without even rigorous testing," said Vinkesh Gulati, president, Federation of Automobile Dealers Associations (FADA). ICAT is the International Centre for Automotive Technology based in Gurgaon for vehicle homologation and testing.

"There are a number of new entrants with a static electronics background. Most of them

import kits from China. They do not have full battery testing infrastructure and limited knowledge in auto electronics, battery management and packaging knowledge is lacking," added Balraj Bhanot, former ARAI director, an automobile homologation expert and former chairman, Central Motor Vehicle Regulations committee.

According to FADA's Gulati, EVs need to be considered an automotive industry technology rather than just a technology industry that enables some companies to focus on offering technology along with EVs and compromising product safety.

A negative consumer experience will undermine consumer confidence and sentiment about these new environmentally friendly mobility options. EVs are a new and unique technology that requires significant research and development to make them safe and efficient for Indian terrain and climate," he said.

In response to these accidents, the government's testing — which includes ARAI and ICAT, which are responsible for giving Type Approval certificates, are considering introducing an additional layer of safety audit. For EVs, "As of now these consumers are only looking at the safety and their aggregates. They are actively looking to widen the scope of testing by including a safety or fire audit for the vehicles as well," said a safety expert.

Like to buy but not convinced about infrastructure available for electric scooters where in

Figures in %

Mustafa Wajid, member of the Institution of Engineering and Technology (IET), Future of Transport and Mobility Strategy, said there are two scenarios in which safety issues must be considered with priority. One is that while charging the EVs, adequate care and electrical protection must be provided at the point of connection to the incoming supply. "It is also important that EV chargers supplied by the EV maker are used, since compatibility with power supply and electrical systems is mandatory," he said. The second is the safety issues arising due to internal causes in the battery packs placed inside the EV, while it is being driven or parked. This is the exclusive responsibility of the EV manufacturer.

But until more stringent standards are in place, for buyers of EVs, it's still caveat emptor.

India's changing Covid-19 mix

GISAID data shows definitive decline in prevalence of Omicron variant in samples

SACHIN P MAMPATIA & SOHINI DAS
Mumbai, 31 March

The Indian SARS-CoV-2 Genomics Consortium (INSACOG), the government's initiative for monitoring genomics, has put out its weekly bulletin on January 10. There has been no further weekly update on what Covid-19 variants are being the rounds in India for nearly three months now.

INSACOG, a global initiative for sharing genomic data. The prevalence of the Omicron variant in Covid-19 samples is definitively declining, shows information available on their website and on trackers including Covariants.org and Our World in Data, which collate the numbers.

INSACOG accounted for around 97 per cent of samples tested as of February 7, nearly a month after INSACOG's last update. Exactly a month later, this had dropped to around 88 per cent. The share of "other" samples that cannot be classified under any one variant — rose to 12 per cent from around 2 per cent earlier (see chart 1).

Anurag Agrawal, director, Institute of Genomic and Integrative Biology, clarified that the "other" were not the hybrid version of the Delta and Omicron variants, commonly dubbed "Deltacron".

"There are almost all the samples we saw that prevent exact classification," Agrawal explained. "When the cases decline, the viral load is low in the samples and so the sequences are not as good. So there are sequencing gaps that

prevent exact lineage matching. Whenever we submit the viral load is low and such sequences rise, we see with the Delta wave as well."

INSACOG also said that the term Deltacron is vague and best avoided. As far as the Omicron variant goes, he said that the BA.2 sequence is extremely common in India. "The Omicron wave in India witnessed was mostly BA.2. That is different from Deltacron — a wrong term used to describe rare recombinants. Omicron is BA.1, BA.2 and BA.3," Agrawal explained.

Last month, a senior member of INSACOG had told Business Standard that so far, there has been no instance of the Deltacron variant in India. There are, however, cases of "mixed infections".

"There are instances of mixed infections — Omicron with Delta — which have been picked up initially... In the beginning of the third wave, when Delta was in circulation, we saw some mixed cases. Now, Omicron is the leading variant," the official had said.

Explaining cases of mixed infections, he said that an individual meets two persons who are carrying two different strains, there is a possibility of this individual getting infected with both the strains at the same time. This is called mixed or combination infection. This is caused by a recombination of variants, not a mutation of the virus.

"The share of 'other' in the samples was around 4 per cent on January 10.

The attribution of the rising share of 'other' to a fall in cases seems to find some support in international data. Business Standard also looked at the latest available genomic data for the top

1. OMICRON SHARE ROSE AFTER JANUARY

(share of samples, in %)

Note: *% share of the variant is less than 0.01 per cent. Compares top 5 countries with highest cases in the last seven days in India. Data as per latest available. Based on samples analysed. Source: GISAID, Covariants.org, Our World in Data

2. DOMINANT IN COUNTRIES SEEING SURGE

(share of samples, in %)

Note: *% share of the variant is less than 0.01 per cent. Compares top 5 countries with highest cases in the last seven days in India. Data as per latest available. Based on samples analysed. Source: GISAID, Covariants.org, Our World in Data, World

to ramp up genomic sequencing from 10,000 samples a month to 8000-10,000 a week. An INSACOG source said sampling has increased as a percentage of total cases, but an increase in absolute terms is not possible now with fewer samples and lower viral loads. INSACOG started Covid-19 genome sequencing in December 2021

POSTAL BALLOT NOTICE

The Members of the Company are hereby informed that pursuant to Section 108, 110 of the Companies Act, 2013 read the Companies (Meetings and Business) Rules, 2014 (including any amendments/modification(s), amendment(s) or re-enactment(s) thereof), the applicable provisions of SEBI (Listing Obligation and Disclosure Requirements) Regulations, 2015 and Secretarial Standards on General Meetings issued by the Institute of Company Secretaries of India read with the General Circular No. 14/2020 dated 8th April 2020, General Circular No. 17/2020 dated 13th April 2020, Circular No. 22/2020 dated 15th June 2020, Circular No. 33/2020 dated 28th September 2020, Circular No. 39/2020 dated 31st December 2020, General Circular No. 10/2021 dated 23th June 2021 and General Circular No. 20/2021 dated 08th December 2021 and other applicable Circulars issued by the Ministry of Corporate Affairs ("MCA") and the Securities and Exchange Board of India ("SEBI") (hereinafter collectively referred to as "Statutory") and other applicable laws and regulations (including any statutory modification or re-enactment thereof for the time being in force), EIH Limited ("the Company") is seeking your approval for the Special Business as mentioned in the Notice of the Postal Ballot dated 16th March 2022.

The dispatch of Postal Ballot Notice along with explanatory statement ("Notice") only through electronic mode was completed on 31st March 2022 to those Members whose name appear in the Register of Members or in the Register of Beneficial Owners provided by the Depositories as on Friday 18th March 2022 on their e-mail IDs registered with the Company or with the Depositories. Copy of the said Postal Ballot is also available on the website of the Company and Stock Exchanges. Pursuant to MCA circulars requirement of sending the physical copies of the Postal Ballot Notice and Postal Ballot Form has been dispensed with.

As required under Regulation 44 of the Securities and Exchange Board of India (SEBI) (Listing Obligations and Disclosures) Regulations, 2015, the Company has engaged the services of Link Intime India Private Limited (LIIPL) to provide remote e-voting facility to all the Members of the Company. The Company has appointed, Mr. Ajay Kumar Jain, Practising Company Secretary, JUS & Associates as the Scrutinizer for conducting the process of remote e-voting, in a fair and transparent manner.

Remote e-voting will commence at 9:00 A.M. on 2nd April 2022 and ends at 5:00 P.M. on 5th April 2022. LIIPL will disable the remote e-voting and e-voting system, on 1st May 2022. The Members are, therefore, advised to exercise their vote well in advance.

Detailed procedure for remote e-voting is provided in the said Postal Ballot Notice. In case of any queries/issues, you may refer to Frequently Asked Questions ("FAQs") and InsVite E-Voting manual available at <https://investor.eihltd.com>, under helpdesk@eihltd.com or by email to investor@eihltd.com or in person at: Tel: 022 - 4918 6000 or write an email to the Company on esdho@oberoigroup.com.

The result will be declared on Monday, 2nd May 2022 on or before 5:00 p.m. The result along with the Scrutinizer Report shall be displayed on the website of the Registrar of Companies of the Company at Mangroo Lane, Kolkata - 700 011 and shall also be placed on the Company's website, www.eihltd.com and communicated to the stock exchanges.

NOTICE OF THE EXTRAORDINARY GENERAL MEETING AND E-VOTING INFORMATION

Notice is hereby given that the Extraordinary General Meeting ("EGM") of the members of M/s Chemfab Alkalies Limited ("the Company") will be held on Friday, 22nd April 2022 at 10:00 AM (IST) in compliance with the circulars issued by the Ministry of Corporate Affairs (MCA) dated 8th May 2020, 13th January 2021, 15th January 2021 and 15th January 2021 issued in the Securities and Exchange Board of India (SEBI) (Listing Obligations and Disclosures) Regulations, 2015, the Company is providing its Members the facility to exercise their vote by electronic means in respect of the Resolutions proposed to be transacted at the EGM. The facility to exercise their vote by electronic means will be available to the members and the facility of e-voting and for participation to the members participating in the EGM through VCOVAM. The notice of the EGM along with the explanatory statement is sent only via email to all the shareholders whose email address was registered with the Company or in the depository/inter-depository participants. The Notice of the EGM along with the explanatory statement is also available at the website of the Company, www.chemfabalkalis.com.

Members may also exercise their vote by electronic means through the facility of remote e-voting under shareholder/member login by using the remote e-voting credentials. The process and manner of remote e-voting, attending the EGM through VCOVAM and E-voting through EGM, for members holding shares in demat form or physical form and for members who have not registered their email has been provided in the Notice of EGM. We further inform that:

i. The Cut-off date for determining the eligibility for remote e-voting and attending EGM through VCOVAM system is 15th April, 2022. A person whose name is not in the register of members or in the register of beneficial owners maintained by the depositories (in case of shares held in dematerialized form) as on the cut-off date is 15th April, 2022 may still be entitled to avail the facility of remote e-voting as well as attending the EGM through E-voting system.

ii. Remote e-voting shall commence at 09:00 AM (IST) on 19th April, 2022 and end at 05:00 PM (IST) on 21st April, 2022 and E-voting shall not be allowed beyond the said date and time.

iii. The facility for e-voting shall also be made available to the members participating in the EGM through VCOVAM and the members, who have not cast their vote by remote e-voting, shall be allowed to vote through E-voting in the EGM. However, a Member may participate in the EGM through VCOVAM even after exercising his/her right to vote through remote e-voting but shall not be allowed to vote through the EGM. Any person who acquires shares of the Company and becomes a Member of the Company after sending of the Notice and holding shares as of the cut-off date, may obtain the user ID and password by sending a request at: helpdesk.evoting@chemfabalkalis.com, corporate@chemfabalkalis.com. However, if a person is already registered with COSE for e-voting, then the existing user ID and Password can be used for casting their vote. A person who is not a member as on the cut-off date should state the Notice of EGM for information purpose only.

iv. In case of any queries/issues connected with the remote e-voting and E-voting through VCOVAM, the members are requested to seek assistance before or during the EGM. The members may Mr. Rakesh Datta (022-23558738) at the designated email IDs: helpdesk.evoting@chemfabalkalis.com or Mr. B. Vignesh Ram, Company Secretary & Compliance Officer of the Company at the designated email ID: corporate@chemfabalkalis.com.

Fintech's everywhere in India; banks need a counterattack

ANAND MUKHERJEE
Mumbai

Visit a mid-sized store in an Indian city, and you'll wonder if it exists to make any money. It might just as well be there to process transactions for half-a-dozen payment apps.

PhonePe, Paytm, Google Pay, BharatPe, Amazon Pay and MokaBkiv. Add up the merchants who have downloaded the digital services and the figure quickly reaches 80 million. A third of India's 60 million-plus small businesses are using an average of four different payment apps, according to Raman Khanduja, the chief executive officer of Mintoak, a Mumbai-based fintech.

"The neighbourhood shopping keeper's bandwidth is getting sucked into accepting money," he says. "When do they run their business?"

There are several juggling acts going on here, apart from the millions of small businesses reconciling their accounts across the many services that have sprung up as an alternative to cash and plastic. The payment apps don't make any money out of this activity because they all run on a shared public utility. What they get is data they can analyse to assess the creditworthiness of the small shops. It's the banks that ultimately issue loans to these "thin-file" customers but fintech controls the flow of information. That gets them an edge with the lenders for finding creditworthy merchants. But why have the banks let fintech get between them and all these potential clients?

Historically, depository institutions in emerging markets like India didn't see much business in dematerialising cashless

payments. Card readers were costly pieces of hardware, and card payments were slow. These were well-established. These point-of-sale devices were also dumb: Even when the lenders got data about a store that was swiping a lot of cards issued by them, to advance money to a retailer based on that knowledge required multiple sales calls. It wasn't worth the trouble then, and makes even less sense now that India's digital revolution has put plastic in the shade. Credit and debit cards get swiped in two out of 10 transactions — usually for higher-value purchases and at bigger retailers.

But banks also fell behind in embracing payments on smartphones. They don't have a tech DNA and the weight of their legacy infrastructure needed to be broken down to make way for new online products. Fintech, which was far nimbler and more willing to shun generous cash-backs at early adopters, jumped on the opportunity created by India's six-year-old Unified Payments Interface. Using this highly popular, open-source protocol, mobile apps in India move funds in real time between the users' bank accounts, person-to-person transfers and QR codes to settle shopping bills. Nearly 2 billion such merchant transactions got done last year. That's what fintech is all about.

The government manning only a fragment of actual sales. "Nobody is getting enough data to offer meaningful financial services," Khanduja says.

You'd think the apps, looking for ways to make money from payments, would attack the banks' deposit-taking franchise. Then they are, actually. BharatPe part-owns a bank and is thus in a position to lure retailers to switch their current

accounts. Similarly, Alphabet Inc's Google Pay, the second-most popular consumer wallet in India after Walmart Inc-owned PhonePe, is using its way to promote fixed deposits. If lenders lose control of both demand and time deposits, what's even the point of their banking licenses?

Lending in a digital world is proving to be equally problematic. Banks aren't intuitively geared to handle the unique requirements of small businesses. Suppose the salesperson for Unilever Plc's local unit shows up at a store and says, "Since I have to meet my quarterly target, you can have another 5 per cent discount if you pay upfront." Traditional lenders' internal processes are too slow to clear an immediate loan like that. What's needed are the types of approved credit limits based on the borrower's digital cash flows and innovative products like buy-now-pay-later — but for retailers. This is what banks have been missing out on. Now they want to reclaim the lost ground. But can they?

Perhaps. They'd have to come in as consolidators, leveraging the trust advantage they still have over fintech, which is hobbled by its own ubiquity. Because there are already so many apps on an average shopkeeper's phone, each service offering only a fragment of actual sales. "Nobody is getting enough data to offer meaningful financial services," Khanduja says.

That's why the former Visa Inc executive, together with a couple of his colleagues, came up with the idea of Mintoak, a white-label merchant-payment platform for banks that can

accept all digital payments as well as cash and cards. It provides a single payment gateway for retailers to run their business. Mintoak, which works with HDFC Bank Ltd and State Bank of India, two of India's largest lenders, earns a substantial fee and gets a cut on products that banks sell on the platform. HDFC Bank owns 5.2 per cent of the startup.

India's success in digital finance has inspired many emerging markets to design payments along similar lines, giving Mintoak a foothold in West Asia and the prospect of its first client in Africa. "We want to reconnect banks with SMEs," says Khanduja.

Payments aren't the only way to tap small businesses. A vast chunk of the working capital retailers need is embedded in the inventory. This credit needs to reach them through payments along similar lines, giving Mintoak a foothold in West Asia and the prospect of its first client in Africa. "We want to reconnect banks with SMEs," says Khanduja.

This credit needs to reach them through payments along similar lines, giving Mintoak a foothold in West Asia and the prospect of its first client in Africa. "We want to reconnect banks with SMEs," says Khanduja.

NEWS ANALYSIS

INTERNAL PROCESSES ARE TOO SLOW TO CLEAR AN IMMEDIATE LOAN LIKE THAT. WHAT'S NEEDED ARE THE TYPES OF APPROVED CREDIT LIMITS BASED ON THE BORROWER'S DIGITAL CASH FLOWS AND INNOVATIVE PRODUCTS LIKE BUY-NOW-PAY-LATER — BUT FOR RETAILERS. THIS IS WHAT BANKS HAVE BEEN MISSING OUT ON. NOW THEY WANT TO RECLAIM THE LOST GROUND. BUT CAN THEY?

Perhaps. They'd have to come in as consolidators, leveraging the trust advantage they still have over fintech, which is hobbled by its own ubiquity. Because there are already so many apps on an average shopkeeper's phone, each service offering only a fragment of actual sales. "Nobody is getting enough data to offer meaningful financial services," Khanduja says.
