In the meetings of the Board, the Directors abstain from participating in the items in which they are concerned or interested. For identifying and tracking conflict of interests involving the Directors / KMPs of the Company, the Corporate Secretarial team maintains a database of the Directors and the entities in which they are interested. This list is shared with the finance department which flags off the parties in their system for monitoring and tracking transaction(s) entered by the Company with such parties.

**PRINCIPLE 2: BUSINESSES SHOULD PROVIDE GOODS AND SERVICES IN A MANNER THAT IS SUSTAINABLE AND SAFE:**

**Essential Indicators:**

- Percentage of R&D and capital expenditure (capex) investments in specific technologies to improve the environmental and social impacts of product and processes to total R&D and capex investments made by the entity, respectively.

	FY 2022-23	FY 2021-22	Details of improvements in environmental and social impacts
R&D	60%	60%	Non-asbestos fibre cement corrugated roofing sheet (Charminar Fortune) received GreenPro certification
Capex	72%	37%	

- Does the entity have procedures in place for sustainable sourcing? (Yes/No): Yes
  - If yes, what percentage of inputs were sourced sustainably?

The company's robust sourcing practices balance cost-effective procurement of quality and responsible products with opportunities to promote societal development across the manufacturing life cycle.

HIL builds mutually beneficial relationships with vendors and guides them on process and system improvements. The Company aims to use sustainable transportation systems that are fuel-efficient, have lower emissions and are less polluting. Sourcing from local / nearby areas also reduces the carbon footprint associated with the transportation of input materials. The Company sources fibre and cement in bulk-size vessels and uses waste/by-products from other industries as input materials. HIL purchases energy-efficient office supplies and uses managed services for printers. 100% of our critical raw materials are sourced sustainably.

HIL intends to introduce an e-procurement tool that will be connected with its Enterprise Resource Planning tool to make the process more reliable and transparent. This will result in improved vendor communication and a significant reduction in paperwork and associated travel, lowering the carbon footprint and saving cost.

- Describe the processes in place to safely reclaim your products for reusing, recycling and disposing at the end of life, for (a) Plastics (including packaging) (b) E-waste (c) Hazardous waste and (d) other waste:

When the Company's products reach the end of their life, they are converted into Construction and Demolition waste. As a result, the safe recovery of items for reuse, recycling, and disposal at the end of their life does not fall within the Company's responsibility.

HIL is in the process of getting registered as a Brand Owner under Plastic Waste Management Rules. It is also preparing targets and measures to safely reclaim the packaging material of its products.

- Whether Extended Producer Responsibility (EPR) is applicable to the entity's activities (Yes / No). If yes, whether the waste collection plan is in line with the Extended Producer Responsibility (EPR) plan submitted to Pollution Control Boards? If not, provide steps taken to address the same.

Yes. HIL has received EPR registration as an Importer. The registration as a brand owner is under process.

**10. Health and safety management system:**

- a. Whether an occupational health and safety management system has been implemented by the entity? (Yes/ No). If yes, the coverage such system?

Yes, the Company places the highest importance on health and safety of its employees and workers. It closely monitors the Environment and Occupational Health and Safety of operations and people and ensures all applicable practices are followed. HIL's health and management system complies with global and national standards and applies to 100% of its employees and workers.

- b. What are the processes used to identify work-related hazards and assess risks on a routine and non-routine basis by the entity?

Hazard Identification and Risk Assessment (HIRA) is an important measure adopted by HIL to ensure workplace safety and minimise potential risks to workers.

The Company determines hazards through a structured process as outlined below:

- **Identify hazards:** Accident reports are reviewed, the workplace inspected and interviews are conducted with workers to identify potential hazards. These include anything that could cause harm to workers, such as electrical, chemical or physical hazards.
- **Assess risks:** Once identified, the level of risk associated with each hazard is assessed. This involves determining the likelihood of an incident occurring and the severity of the potential harm using a 5X5 risk matrix.
- **Determine controls:** Thereafter, the controls that can be implemented to minimise or eliminate the risks are determined. This can include engineering controls (such as installing guardrails), administrative controls (such as establishing safe work procedures) or personal protective equipment (PPE) (such as providing workers with respirators).

- c. Whether you have processes for workers to report the work-related hazards and to remove themselves from such risks. (Y/N)

Yes. Employees are encouraged to communicate ways to improve safety protocol. They drop written ideas into a suggestion box. These are then reviewed by the head of the plant and acted upon, depending on the severity of the incident.

- d. Do the employees/ worker of the entity have access to non-occupational medical and healthcare services? (Yes/ No)

Yes, a focus on employee health begins at the start of the employment process with a pre-employment medical check-up and continues during the employment and post-employment phases. During periodic medical examinations, tailor-made health education and counselling sessions are conducted for employees. HIL has established a system for the medical surveillance of employees' overall health, covering both occupational and non – occupational diseases.

**Non-occupational diseases:** The first step in the process is early diagnosis, followed by treatment. Next, steps are taken to prevent the onset of complications and untimely demise. The Company's interventions have minimised morbidity and mortality rates. The final step in this process is administering health education to reiterate the importance of healthy practices and ergonomics.

It includes policies and procedures for hazard identification, risk assessment, and control measures, as well as training and education for employees.
- **Conducting regular risk assessments:** Regular risk assessments are conducted to identify potential hazards in the workplace, evaluate the associated risks, and implement control measures to mitigate those risks.
- **Providing personal protective equipment (PPE):** Depending on the nature of the work being done, employees are provided with PPE, such as hard hats, safety goggles, respirators, gloves and safety shoes, to protect them from potential hazards.
- **Implementing engineering controls:** Based on the risk score, engineering controls, such as ventilation systems, guardrails, machine guards and interlocks are implemented to eliminate or reduce exposure to hazards.
- **Providing training and education:** Training and education are provided to employees on safe work practices, hazard recognition, and the proper use of PPE and equipment.
- **Incident reporting system:** A robust incident reporting system has been established to ensure that all incidents, including near misses, are reported and investigated and that corrective actions are taken to prevent similar incidents from occurring in the future.
- **Conducting regular inspections:** Regular inspections of the workplace are conducted to identify potential hazards, evaluate the effectiveness of control measures and ensure compliance with relevant regulations and standards.

If any person enters the designated danger zones, the AI camera detects the human presence and immediately triggers an alarm to the concerned operator to shut off the moving parts of the machine.

Management of change procedure (MOC) has been deployed to capture any process-related changes by conducting hazard identification and risk assessments to determine the potential impacts of the changes on humans and property. Hazard identification and risk assessments are ongoing processes. The risk register is kept up to date and helps to mitigate risks.
