HIGHLY SPECIALIZED IN MANUFACTURING PRECISION ENGINEERED SOLUTIONS

Our Technical know how is a moat reflected by our expertise in Bimetals and our first mover advantage for Shunt Resistors

Shunt Resistors are manufactured through Electron Beam Welding (EBW) Process

- EBW is a highly specialized process where a cloud of electrons emitted from a tungsten cathode are accelerated in high vacuum for joining strips
- The company can deliver customized Shunt Resistors due to the precision welding process along with down the line finishing capabilities

Thermostatic Bimetals are manufactured through Diffusion Bonding Process

- Metals are joined to best take advantage of the “Bimetal Effect” i.e., movement caused by their different coefficients of expansion as they respond to temperature changes
- Post bonding, all finishing processes including component manufacturing are done in house

Electrical Contacts are key components which act as connecting points in a switchgear

- The contact materials used in such components is typically made of different types of precious metal alloys
- These materials are then joined on to copper or copper alloy substrates using various methods such as welding, cold bonding, hot bonding, or riveting

PRECISION ENGINEERED SOLUTIONS FOR DIVERSIFIED END APPLICATIONS

Only company in the world to provide a portfolio of Shunt Resistors, Thermostatic Bimetals and Electrical Contacts under one roof

Shunt Resistors

Thermostatic Bimetals

Electrical Contacts

Product Description

- Shunt Resistors are electrical components that “regulate the flow of electrical current” in an electrical circuit
- It is used to measure and sense the flow of current and create a low resistance path for electric current to pass through it
- Shivalik, one of the preferred supplier globally, produces a wide range of highly dependable Resistors that are used in electronics, electrical, and automotive industry

- Thermostatic Bimetals are “critical components used in overload protection devices”
- Thermostatic Bimetals are formed by mechanically diffusing two or more alloys to combine their individual properties
- Shivalik is the largest supplier of Thermostatic Bimetal in India with more than grades and possesses the potential to satisfy global demand

- Electrical contacts are key components which are connecting points when a switch is turned on or off
- The contact materials are typically made of different types of precious metal alloys. These materials are then joined on to copper alloy substrates using various methods
- Shivalik specializes in the production of electrical contacts with its core competency focused on specialized joining processes
