REC arm removes Chinese firm from J&K smart meter project

PRESS TRUST OF INDIA

New Delhi, July 30

STATE-OWNED REC Power Distribution Corp (RECPDC) on Friday said it is removing a Chinese firm from the smart meter project in the Jammu and Kashmir soon after the government order on sourcing of equipment from "prior reference".

RECPDC, an arm of Rural Electrification Corp (REC), had in September 2019 awarded a pact for installation of 1,195 lakh smart meters in Jammu &

Kashmir to Techne Electric & Engineering Co Ltd.

In a statement, RECPDC said the project was awarded to an Indian company, Techne Electric & Engineering Co Ltd. The company will be involved as part of that reference of those who were contractors for different components of the project.

After the power ministry issued an order mandating procurement of equipment for any import of equipment from "prior reference" countries or nations with which India shares borders, to check for possible cyber-

attacks through malware/jarvis, the company reviewed all new/ongoing contracts. "After this order was issued, all new/ongoing contracts are under review. Techne Electric & Engineering Co Ltd. is one of the contractors of the (JK) project, which though a company registered in India and having manufacturing facilities in India, was found to be a subsidiary of a Chinese company."

The principal contractor has informed RECPDC that they have no comment on that sub-contractors, a statement said.

Rajasthan wary of second wave of locust attacks in coming weeks

FE BUREAU
New Delhi, July 30

CHANCES OF FRESH arrivals of swarms of locusts from across the border are a cause of concern for Rajasthan, which has been affected. Among the districts in the state, 261 Gangaragar, Bikaner, Jaisalmer and Barmer, which are located on India-Pak border, are more vulnerable to locust attack.

Official said that while there was limited damage to cotton crop in some places, the locusts are currently under control.

Control operations have been done in nearly 4.1 lakh hectares in 10 states since April 11, the agriculture ministry said. The areas of the concentration of locusts are located in various districts of Rajasthan; farmer leaders said that crops in as many as 2.1 lakh hectares are severely affected where farmers cannot even re-sow due to low rainfall.

In Bikaner, which has a kharif sown area of 14 lakh hectare in a normal year, the area sown under cotton is just only 1.2 lakh hectares due to deficient rains. As many as four of 10 districts in western Rajasthan are facing deficient rainfall while the region as a whole has 13% below normal monsoon. So far, 17 precipitation monitors in network of the state can take up such a pulse crop similar to monsoon gear by mid-August.

Multiple swarms of locusts — immature and adult have been reported from across the border in Rajasthan since mid-May 2020. Both early grown crops and post monsoon crops such as maize, cotton, bajra and jowar are affected varying degrees of losses. "Although the control measures implemented by both Central and State governments are commendable much desired outcome, we must not be complacent as locusts now can strike from within due to localised breeding as well as outside as reported by Free and Fair Weather Organization (FAO)" says Bhagirath Choudhary, founder director of South Asia Biotechnology Centre, an organisation working on invasive pest such as fall armyworm and locusts.

Both Central and states must enhance coordination and make available chemicals — more of those which can be applied on crops with environmental友好的. The government should also evaluate the outcome of different types of control as both aerial and aerial spraying by both expert in order to optimize resource utilization in the future control programme, he said.

From the biotechnology Centre and the state for not controlling locust at the beginning and said that the swarm of pests spread to other states due to not intervening to time. "The Centre should not do politics over it and take it as a priority as this is a national issue and not a state issue and while states have limited resources to manage such pests. The state government should also concentrate more on locust control," said Amera Ram, a former MLA and farmers leader of Rajasthan.

The TAO in its July 21 update has said that the risk of swarm migration from Horn of Africa persists in coming weeks. In some areas the migrating swarms across the north and a limited number of swarms could migrate across the Indian Ocean to the Indo-Pakistan border area. "The hatched crops where these locusts have spread have been completely destroyed and there is very little and there is no time left for re-sowing. Fortunately, the areas where these locusts are spotted are very limited, so far. But the government has to be alert and should take immediate action against pests especially if there is fresh arrival from across the border," said Ramlal Jat, another farmer leader.

"Since small farm holders in Rajasthan and the border districts are most vulnerable to locust attack, the government should declare locust attack as a natural disaster so that farmers get some compensation under the Pradhan Mantri Fasal Bima Yojana (PMFBY)." Choudhary said.
