GE T&D India wins a SCADA & ADMS project from Jammu & Kashmir Power Development Department to deliver 24/7 power availability

- *GE T&D receives order worth approximately INR 173 Crores from JKPDD*
- *GE T&D India Limited is executing the SCADA & ADMS project in Jammu and Srinagar*
- *GE T&D India's latest SCADA & ADMS technology will help deliver 24x7 reliable power to the people of the twin cities*

New Delhi, January 23, 2020: As part of its commitment to strengthen and modernize the energy transmission and distribution network of the country, GE T&D India Limited (NSE: GET&D, BSE : 522275) announced today that it was awarded a Supervisory Control and Data Acquisition (SCADA) and [Advanced Distribution Management Solution \(ADMS\)](#) project by the Jammu & Kashmir Power Development Department (JKPDD) for the distribution operations in the cities of Jammu and Srinagar.

The order worth approximately INR 173 Crores, won through a competitive bidding process, includes a 5-year maintenance services contract and the supply and integration of a host of solutions in the overall distribution network in the two cities.

On the announcement, **Pitambar Shivnani, CEO of GE T&D India Limited** said, "GE T&D is proud to partner with the Jammu & Kashmir Power Development Department which is working tirelessly at improving the availability, reliability and quality of power supply, whilst minimizing AT&C losses. The commitment towards the implementation of this technology is a major step towards realizing the vision of 24x7 power supply to all consumers in the twin cities of Jammu and Srinagar."

The technology solution being executed for this project is used mainly for 24x7 power supply, reduction of power losses and real-time data monitoring and control of distribution network from a centralized place. This will determine the setting up of reliable and "no manual touch" systems for system control / data collection and adoption of Information Technology in the area of energy accounting. SCADA technology reduces aggregate technical and commercial (AT&C) losses and enables real-time monitoring and control of the electric distribution network, handling of loads during load shedding and restoration and plugging of pilferage points. Implementation of the SCADA and ADMS also results in the greater supply of quality power, faster identification of faults and early restoration of power supply—and last but not least, the proper planning and design of the distribution network.

About GE T&D India Limited:

GE T&D India Limited is the listed entity of GE's Grid Solutions business in India. With over 100 years of presence in India, GE T&D India is a leading player in the Power Transmission & Distribution business - a product portfolio ranging from Medium Voltage to Ultra High Voltage (1200 kV) for Power Generation, Transmission and Distribution, Industry and Infrastructure markets.

GE T&D India has a predominant presence in all stages of the power supply chain and offers a wide range of products that include Power Transformers, Circuit Breakers, Gas Insulated Switchgears, Instrument Transformers, Substation Automation Equipment, Digital Software Solutions, Turnkey Solutions for Substation Engineering & Construction, Flexible AC Transmission Systems, High Voltage DC & Services suite of offerings. With 6 manufacturing sites, GE T&D India is future ready to meet the growing demands for equipment and services. GE is focused on introducing Green and Digital Solutions aimed towards making the Indian Grid smarter and environmentally friendly.

About GE Digital

GE Digital is transforming how industry solves its toughest challenges. GE Digital's mission is to bring simplicity, speed and scale to its customers' digital transformation activities, with software that helps them to better operate, analyze and optimize their business processes. GE Digital's product portfolio – including grid optimization and analytics, asset and operations performance management, and manufacturing operations and automation – helps industrial companies in the utility, power generation, oil & gas and manufacturing sectors put their industrial data to work.
