# Covid vaccine race goes to booster as field widens

More competitors get DCGI nod to advance to clinical trial stage

VINAY UMARJI & SOHINI DAS  
Ahmedabad/Mumbai, 3 July

The race to develop a vaccine for SARS-Cov-2 (novel coronavirus) just got hotter as more competitors received regulatory approval from the Drugs Controller General of India's (DCGI's) Central Drugs Standard Control Organisation (CDSCO) to conduct phase-II clinical human trials.

Recently, Bharat Biotech's Covaxin, a vaccine candidate that it developed in collaboration with the Indian Council of Medical Research (ICMR) and the National Institute of Virology (NIV), was approved for human trials, making it the first indigenously developed vaccine to get the nod.

To develop Covaxin, NIV Pune isolated the virus strain and transferred it to Bharat Biotech. And the vaccine has shown positive results in pre-clinical animal trials.

On Thursday, CDSCO also approved Zydus Cadila's plasmid DNA vaccine candidate ZyCoV-D, developed at its Vaccine Technology Centre in Ahmedabad.

With the ICMR setting August 15 as the deadline to launch a Covid-19 vaccine, Zydus Cadila intends to ramp up production capacities of ZyCoV-D to cater to Indian and global demand.

The firm said the vaccine elicited a strong immune response in mice, rats,

The University of Oxford and AstraZeneca's experimental vaccine has entered the final stage of clinical trials. Scientists have initiated clinical trials in 5 Africa, while the Indian partner, Serum Institute of India, is hopeful it will be made available by year-end

guinea pigs, and rabbits. "The antibodies produced by the vaccine were able to completely neutralise the wild type virus... indicating the protective potential of the vaccine candidate," Cadila Healthcare said in an official communiqué on Friday.

Meanwhile, the University of Oxford and AstraZeneca's experimental Covid-19 vaccine has entered the final stage of clinical trials. Scientists have initiated clinical trials in South Africa, while the Indian partner, Serum Institute of India (SII), is hopeful it will be made available by year-end.

Scientists at the University of Witwatersrand have started clinical trials in South Africa with the team set to test the 'Ox1Cov-19' or 'Oxford Vaccine'. Adar Poonawalla, chief executive officer of Serum Institute, has said the company

will need to conduct phase-III clinical trials here before launching the vaccine.

Apart from partnering with AstraZeneca to supply a billion doses of Oxford's potential vaccine to low and middle-income countries, Serum Institute is also working on a recombinant BCG vaccine as an immunity booster against respiratory viruses. Trials for this are on in India, and the first batch might go into production by August-September.

Indian Immunologicals (IIL) is also conducting preclinical trials on small animals and non-human primates. However, according to the company's Managing Director Anand Kumar, these trials could go on till December. The company is working on a live-attenuated weakened placid vaccine candidate that almost resembles the Covid-19
