US treasury mkt cracks as Fed begins pull back

Inflation rise upped yield on two-year Treasury notes by 10 basis points

Bloomberg
feedback@livemint.com

Warning signs are starting to flash at the regulators of the \$22-trillion US Treasury market, which is being whipsawed by volatility just as the Federal Reserve begins pulling back from its \$80 billion-a-month buying spree.

Sparked by a report of surging inflation that led traders to move up the timetable for Fed's first rate increase, the yield on two-year Treasury notes rose nearly 10 basis points Wednesday, its biggest move since March 2020. It capped a period of extraordinary volatility that led to the rockiest 30-year bond auction in a decade and drove a gauge of market liquidity to its most troubled level since the meltdown soon after covid-19 hit the US.

The fissures are appearing just as the market overseers are set to convene virtually Wednesday for an annual event that's been held since 2015, a year after a 12-minute "flash rally" when yields crashed and rebounded with no apparent trigger. That's not supposed to happen in the world's biggest debt market. The agenda is to consider "proposals to improve overall market functioning and resilience".

The urgency may grow by then. The Fed, which has been steadily buying Treasuries since the onset of the pandemic nearly froze trading, is implementing plans to start scaling back its buying by \$10 billion a month. And while regulators are meeting, the Treasury Department will hold its monthly auction of 70-year bonds, providing a test of whether this week's 30-year sale was an anomaly or a sign that the market's ability to function smoothly may be imperiled as the central bank withdraws its support.

Fissures are appearing in the market just as its overseers are set to convene a virtual meeting on Wednesday for an annual event.

"The current structure enables the market to function well when volumes are running around average levels," said Peter Tchir, head of macro strategy at Academy Securities. "But it leads to these periods of large and aggressive moves that seem inexplicable relative to the data. It also makes it hard for asset managers to man-

age their risk."

That was on display this week, when Bloomberg's US Government Securities Liquidity Index—which measures how much yields diverge from a fair-value model—showed conditions were the worst since March 2020.

Yield anomalies in the pricing of Treasuries have broad effects as their yields are used to value global assets.

The Treasury's undersecretary for domestic finance, Nellie Liang, as well as its deputy assistant secretary, Brian Smith, will be part of the conference. Officials from the US central bank include New York Fed President John Williams and Lorie Logan, manager of the System Open Market Account at the reserve bank. Top officials from the Commodity Futures Trading Commission and the Securities and Exchange Commission will also take part in the webcast event.

SCALING BACK

THE Federal Reserve is implementing plans to start scaling back its buying by \$10 billion a month.

THE Treasury Department will hold its monthly auction of 70-year bonds as regulators meet.

ANOMALIES in the pricing of Treasuries have broad effects as their yields are used to value global assets.

Boeing hopes to fix 787 and 737 Max issues

Bloomberg
feedback@livemint.com

Boeing Co. is on the verge of surmounting issues that have held back deliveries of its two most important aircraft, the 787 and the 737 Max, an executive said.

The planemaker is "getting close" to restarting deliveries of the 787, Hsane Mounir, senior vice president of commercial sales and marketing, said in Dubai ahead of an airshow that starts in the city on Sunday. The 787, known as the Dreamliner, is Boeing's most advanced wide-body built with composite materials.

Restarting Dreamliner deliveries, which have been halted for most of this year, is key to a financial turnaround at Boeing. But the planemaker must first address quality defects and win approval from regulators.

"We continue doing meticulous work every step of the way," Mounir said. "This is a case of Boeing being tough on Boeing. This is a case of us looking every single aspect of the design and manufacture of the airplane making sure we're complying."

Boeing is also in discussions with Chinese regulators on re-certifying the single-aisle 737 Max workhorse, senior officials said. Following a successful test flight in August, Boeing expects to restart Max handovers during the first quarter, chief executive officer Dave Calhoun said last month.

China's Civil Aviation Administration has informed airlines it is satisfied design changes suggested by Boeing could address safety issues. Reuters reported on Sunday, citing a notice from the regulator.

List of people who have walked on the Moon set to grow: Musk

Bloomberg
feedback@livemint.com

Responding to another Twitter user on Sunday, Tesla Inc. chief executive Elon Musk said the list of people who have walked on the Moon will soon "grow much longer as humanity reaches new heights".

The original post lists astronauts that have reached

Elon Musk, AFP

and walked on the moon, including Neil Armstrong and

Engineer Gernan.

Musk is also the founder of SpaceX, which has emerged as a space leader, having launched at least 1,700 of its Starlink broadband satellites and shuttled astronauts to the international space station.

Musk had recently conducted a controversial poll on Twitter, asking voters whether he should sell 10% of his stake in the electric-vehicle company.

Lockheed pitches for military solutions

PTI
feedback@livemint.com
NEW DELHI

American aerospace major Lockheed Martin on Sunday said it is ready to address India's requirements for new-age military solutions in the domains of land, sea, space, and cyber-world in sync with the robust framework of fast-expanding Indo-US strategic ties.

William Blair, the vice president and chief executive of Lockheed Martin's India operations, said the company is "well placed" to partner with Indian entities in areas of unmanned platforms, artificial intelligence, quantum computing and machine learning among others.

He also pitched Lockheed's F-21 aircraft, specifically configured to meet the IAF's needs, as the best option in the force's hunt for 114 combat jets.

Blair said the company will focus on the highest level of indigenization in the plane and set up a production facility in India for the export market as well if it gets the contract.

Lockheed has already tied up with the Tata group to manufacture the aircraft in India and promised not to sell the F-21 to any other country provided it secures the multi-billion dollar deal.

"We are already mobilizing actively through our joint ventures to establish capability and to start delivering in advance of requirements, just as we did in the case of the C-130J programme," Blair said.

"Simply put, it is actually going to meet and exceed the requirements as we believe in the highest level of indigenous content and the exclusive production-line will open up the greatest potential for exports. I think it is going to be unmatched," he added.
