PRESS RELEASE

ASARFI HOSPITAL LIMITED OPERATIONALIZES THE STATE-OF-THE-ART COMPREHENSIVE CANCER HOSPITAL IN JHARKHAND

ASARFI HOSPITAL LIMITED, a leading innovator in the healthcare industry, is thrilled to announce the launch of our newest business unit, ASARFI CANCER INSTITUTE.

Asarfi Cancer Institute is located in Ranguni Road, Bhuli, Dhanbad. The hospital is a dedicated Comprehensive Cancer Care Center and is the only cancer hospital in Dhanbad. It is the 3rd Cancer Hospital in Jharkhand. The cancer hospital will cover the population of 200 Km Circle Radius which includes 14 Districts of Jharkhand and Neighboring Districts of Bihar, West Bengal and Orrisa. The Hospital is built on a 9.55 Acre Campus with State-of-the-Art Equipment and Infrastructure. The hospital is 150 bedded and comprises of 3 Floors with a total of 39000 SQFT.

This strategic expansion represents a significant milestone in our company's journey. ASARFI CANCER INSTITUTE will be the first dedicated comprehensive cancer care center in Dhanbad. The center offers 360° cancer care solutions, namely treatment, prevention, screening, second opinion, diagnosis, rehabilitation, follow-up and palliative care. Along with these services, the center also offers day care facilities.

We believe that ASARFI CANCER INSTITUTE will not only enhance our existing capabilities but also open new avenues for growth and collaboration within the healthcare industry.

Services Offered:

- **Radiotherapy**
 - Linear Accelerator (LINAC)

A medical linear accelerator (LINAC) is the device most commonly used for external beam radiation treatments for patients with cancer. It delivers high-energy x-rays or electrons to the region of the patient's tumour. These treatments can be designed in such a way that they destroy the cancer cells while sparing the surrounding normal tissue. The LINAC is used to treat all

body sites, using conventional techniques, Intensity-Modulated Radiation Therapy (IMRT), Volumetric Modulated Arc Therapy (VMAT), Image Guided Radiation Therapy (IGRT), Stereotactic Radiosurgery (SRS) and Stereotactic Body Radio Therapy (SBRT).

- HDR Brachytherapy

HDR Brachytherapy is a powerful form of internally delivered radiation therapy that destroys many types of cancers including skin, cervical, prostate and breast. HDR Brachytherapy can be used as a standalone treatment or after a tumor has been surgically removed to eliminate any remaining cancerous cells.

- **Medical Oncology**

Our facilities offer various treatment options, including chemotherapy, targeted therapy, immunotherapy, hormonal therapy, and other systemic treatments to combat cancer. We also provide supportive care, such as pain management and symptom control.

- Chemotherapy is a drug treatment that uses powerful chemicals to kill fast-growing cells in your body. Chemotherapy is most often used to treat cancer, since cancer cells grow and multiply much more quickly than most cells in the body. Many different chemotherapy drugs are available.
- ICU facilities are designed to provide specialized care for cancer patients who may require critical medical attention due to the complications of their disease, the side effects of cancer treatments, or other medical conditions. These units are equipped with advanced medical equipment and staffed by healthcare professionals with expertise in managing the complex needs of cancer patients.

- Diagnostic Services: Medical oncology facilities have access to a range of diagnostic tools, including imaging (e.g., CT scans, PET scans), blood tests, and biopsies, to accurately diagnose and stage cancer.
- **Surgical Oncology**
 - Surgical oncology is a cancer care field that focuses on using surgery to diagnose, stage and treat cancer. Surgical oncologists may also perform palliative surgeries to help control pain, increase a patient's comfort level and manage cancer-related symptoms and side effects.
 - Surgical ICU is designed to manage patients who are at high risk or have complex surgical needs. SICUs are staffed with a specialized team of healthcare professionals, including critical care surgeons, anesthesiologists, nurses, trained in managing surgical patients in a critical care setting.
 - Surgical oncology operating room (OT) facilities are designed to provide a sterile and controlled environment to ensure the safety and success of cancer-related surgeries.
- **Nuclear medicine facilities**

Nuclear medicine facilities use radiopharmaceuticals, which are radioactive materials that are injected, swallowed, or inhaled by the patient. These radiopharmaceuticals emit gamma rays that can be detected by specialized imaging equipment.

 - PET CT Scan: Nuclear medicine facilities is equipped with Positron Emission Tomography (PET) CT scanners to capture images of the distribution of radiopharmaceuticals in the body. These images provide valuable diagnostic information when it comes to cancer detection.
- **Diagnostic Services**
 - Imaging Services:
 - Computed Tomography (CT) Scans
 - Positron Emission Tomography (PET) Scans
 - Ultrasound

- X-rays
- Mammography
- Biopsy
 - Cytology
 - Immunohistochemistry
- Blood Tests:
 - Tumor Markers
 - Complete Blood Count (CBC)
- Genetic Testing:
- Endoscopy and Bronchoscopy
- Radiology Intervention Procedures
- Cancer Screenings: Cancer hospitals often offer cancer screening programs for early detection. Common examples include mammography for breast cancer, colonoscopy for colorectal cancer, and Pap smears for cervical cancer.
- This expansion reflects our unwavering commitment to the healthcare industry, and we are eager to see the positive impact it will have on our customers, partners, and the industry as a whole.

ASARFI HOSPITAL LIMITED looks forward to the journey ahead, and we are excited about the endless possibilities that ASARFI CANCER INSTITUTE will bring to the table. We thank our loyal customers, dedicated employees, and shareholders for their continued support in our growth and evolution.
