companies and businesses is not a precise science and the conclusions arrived at in many cases will be subjective and dependent on the exercise of individual judgment and management assumptions. There is, therefore, no indisputable single value/share exchange ratio and we normally express our opinion on the value as falling within a likely range. However, as the subject engagement requires the expression of a single value for arriving at the fair equity share exchange ratio, we have adopted a value at the mid-point of our valuation range. Whilst we consider our value to be both reasonable and defensible based on the information available to us, others may place a different value on the Companies.

- 5.6. We will not, pursuant to this valuation engagement, perform any management functions for you nor make any decisions. You are responsible for making management decisions, including accepting responsibility for the results. Additionally, management of Companies is responsible for designating a management-level individual or individuals responsible for overseeing the services provided, evaluating the adequacy of the services provided, evaluating any findings or recommendations, establishing and maintaining internal controls, and monitoring on going activities.
- 5.7. While our work has involved an analysis of financial information and accounting records, our engagement does not include an audit in accordance with generally accepted auditing standards of the client existing business records and as such we do not express any opinion on the truth and fairness of the financial statements. Accordingly, we assume no responsibility and make no representations with respect to the accuracy or completeness of any information provided by and on behalf of the Companies. Our report is subject to the scope and limitations detailed in this report. As such the report is to be read in totality, and not in parts, in conjunction with the relevant documents referred to herein and in the context of the purpose for which it is made.
- 5.8. The actual market price achieved may be higher or lower than our estimate of value depending upon the circumstances of the transaction (for example the competitive bidding environment), the nature of the business (for example the purchaser's perception of potential synergies). The knowledge, negotiating ability and motivation of the buyers and sellers and the applicability of a discount or premium for control will also affect actual market price achieved. Accordingly, our valuation conclusion will not necessarily be the price at which any agreement proceeds. The final transaction price is something on which the parties themselves have to agree. We also emphasize that our opinion is not the only factor that should be considered by the parties in agreeing the transaction price.
- 5.9. Competent management assumed - It should be specifically noted that the valuation assumes the property/business will be competently managed and maintained over the expected period of ownership. This appraisal engagement does not entail an evaluation of Companies' management effectiveness, nor are we responsible for future marketing efforts and other management or ownership actions upon which actual results will depend. This report has given no consideration to matters of legal nature, including issues of legal title and compliance with local laws, and litigation and other contingent liabilities that are not recorded in the audited / unaudited balance sheets of the Companies/ their holding/ subsidiary/ associates / joint ventures/ investee companies, if any.

- 5.10. The Companies and its management/representatives have represented to us that the information they supplied was complete, accurate and true and correct to the best of their knowledge. We have relied upon the representations of the Companies and their management concerning the financial data and operational data. We shall not be liable for any loss, damages, cost or expenses arising from fraudulent acts,
- 5.11. The future projections are the responsibility of the respective management of the Companies. The assumptions used in their preparation, as we have been explained, are based on the management's present expectation of both - the most likely set of future business events and circumstances and the respective management's course of action related to them. It is usually the case that some events and circumstances do not occur as expected or are not anticipated and therefore, actual results during the forecast period may differ from the forecast and such differences may be material. We express no opinion as to how closely the actual results will correspond to those projected/forecast as the achievement of the forecast results is dependent on actions, plans and assumptions of management. 6. VALUATION APPROACH AND METHODOLOGIES

- 6.1. It is universally recognised that valuation is not an exact science and that estimating values necessarily involves selecting a method or approach that is most appropriate for the purpose.
- 6.2. In accordance with ICAI Valuation Standards 2018 issued by the Institute of Chartered Accountants of India and ICAI Registered Valuers Organisation, valuation in case of Proposed Transaction would require determining Fair Equity Share Exchange Ratio considering relative values of each company involved. These values are to be determined independently but on a relative basis, and without considering the effect of the merger.
- 6.3. As per ICAI Valuation Standard 301 – Business Valuations deals with valuation of business or business ownership interest and it includes valuation of equity shares, it is mentioned that generally, the following three main valuation approaches are adopted to perform the business valuation in correlation with the valuation approaches and methodologies prescribed under ICAI Valuation Standard 103 on Valuation Approaches and Methods:
- Market Approach
 - Income Approach
 - Cost Approach

We have discussed each of the above-mentioned approaches in the following paragraphs.

Under Market Approach, following methods are commonly used

- Market Price Method
- Comparable Companies Multiple (CCM) Method
- Comparable Transaction Multiple Method

Under Income Approach, following methods are commonly used

- Discounted Cash Flow (DCF) Method
- Relief from Royalty Method
- Multi-period Excess Earning Method
- With and Without Method
- Option Pricing Model

Under Cost Approach, following methods are commonly used

- Replacement Cost Method
- Reproduction Cost Method

6.4. Market Approach:

Market Approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets, liabilities or a group of assets and liabilities, such as a business.

6.4.1. Market Price Method: The market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading of such shares. As per Regulation 164 (1) of Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations 2018 ('ICDR'), if the equity shares of the issuer have been listed on a recognised stock exchange for a period of twenty-six weeks or more as on the relevant date, the price of the equity shares to be allotted pursuant to the preferential issue shall be not less than higher of the following:

- 6.4.1.1. the average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognised stock exchange during the twenty-six weeks preceding the relevant date; or
- 6.4.1.2. the average of the weekly high and low of the volume weighted average prices of the related equity shares quoted on a recognised stock exchange during the two weeks preceding the relevant date.

We have used market price method for CEBBCO as it is listed on NSE and BSE and record higher traded volume at NSE. Equity shares of JWL are not listed on any stock exchange and therefore this method could not be used for JWL.

6.4.2. Comparable Company Multiple (CCM) Method involves valuing an asset based on market multiples derived from prices of market comparables traded on active market. We have considered EV/EBIDTA multiple under this method for valuation of equity shares of JWL. However, we could not use this method for valuing CEBBCO due to following reasons:

- 6.4.2.1. The trailing 12 months' EBIDTA of CEBBCO as on valuation measurement date is not stabilised and does not exhibit normalised level of operations, and
- 6.4.2.2. We could not identify any listed company in India which is operationally and financially comparable to "vehicle bodies manufacturing" segment of CEBBCO.

6.4.3. Comparable Transaction Multiple (CTM) Method involves valuing an asset based on transaction multiples derived from prices paid in transactions of asset to be valued / market comparable transactions. Comparable transactions involving subject assets are sometimes referred to as prior transaction value. We have not used this method for current valuation of CEBBCO as we did not find comparable transactions in India, in recent past, for which adequate information was available in public domain and we did not consider it appropriate to use international transaction multiples due to lack of identical comparable companies/ transactions having variance on account size, geography, nature of business, nature of transactions, corporate structure, industry / company specific issues etc. Prior transaction value is used for valuation of JWL as JWL has recently issued equity shares to non-related party in an orderly transaction.

6.5. Income Approach:

This approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow (DCF) Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows. DCF method is considered the most theoretically sound, scientific and acceptable method for determination of the value of a business undertaking.

The DCF method values the asset by discounting the free cash flows expected to be generated by the asset for the explicit period and also the perpetuity value (or terminal value) in case of assets with indefinite life. Appropriate adjustment is made for net debt, non-operating assets & other assets of the company to arrive at Equity Value.

The analysis under DCF method involves determining the following:

- **Estimating future free cash flows:**
Free cash flows are the cash flows expected to be generated by the company that are available to all providers of the company's capital – both debt and equity.
- **Appropriate discount rate to be applied to cash flows i.e. the cost of capital:**
The discount rate, which is applied to the free cash flows, should reflect the opportunity cost to all the capital providers (namely shareholders and creditors), weighted by their relative contribution to the total capital of the company. The opportunity cost to the capital provider equals the rate of return the capital provider expects to earn on other investments of equivalent risk.

We have considered it appropriate to apply the DCF Method under Income Approach, as data with respect to prospective financial information is available for both the Companies.

6.6. Cost Approach:

It is a valuation approach that reflects the amount that would be required currently to replace the service capacity of an asset.

- 6.6.1. **Replacement Cost Method**, also known as 'Depreciated Replacement Cost Method' involves valuing an asset based on the cost that a market participant shall have to incur to recreate an asset with substantially the same utility (comparable utility) as that of the asset to be valued, adjusted for obsolescence.
- 6.6.2. **Reproduction Cost Method** involves valuing an asset based on the cost that a market participant shall have to incur to recreate a replica of the asset to be valued, adjusted for obsolescence.

This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, with the values arrived at on the net asset basis being of limited relevance. Therefore, Cost Approach has not been considered since it does not reflect the intrinsic value of the business in a "going concern scenario".

6.7. Summary of valuation approaches and methodologies used for valuation exercise is given below:

Name of Company	Cost Approach	Income Approach	Market Approach		
			DCF	Market Price	CTM
CEBSCO	x	✓	✓	x	x
JWL	x	✓	x	✓	✓
Reference Note No.	6.6	6.5	6.4.1	6.4.2	6.4.3

6.8. It should be understood that the valuation of any company or its assets is inherently subjective and is subject to uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the Companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, the conditions and prospects, financial and otherwise, of the companies/ businesses, and other factors which generally influence the valuation of companies and their assets.

6.9. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of method of valuation has been arrived at using most appropriate methods adopted for transactions of a similar nature and our reasonable judgment, in an independent and bona fide manner based on our previous experience of assignments of similar nature.

7. PROCEDURES ADOPTED IN CARRYING OUT VALUATION ANALYSIS

In connection with this present valuation exercise, we have adopted the following procedures to carry out the valuation:

7.1.1. Preliminary discussion with the management of the Companies to understand the business operations and fundamental factors that affect the business of the Companies including their earning generating capabilities and historical financial performance.

7.1.2. Requested for requisite information for the valuation analysis.

7.1.3. Review and analysis of information provided by the management.

7.1.4. Review of data available in public domain including market price data of CEBSCO from NSE, analysis of key economic factors and industry trends that may impact the valuation.

7.1.5. Detailed analysis of data available for comparable companies.

7.1.6. Assessing the most appropriate valuation approaches and methods for valuation of the Companies within the framework of ICAI Valuation Standards and SEBI guidelines.

7.1.7. Arriving at the valuation of Companies using the method considered appropriate.

7.1.8. Determining the fair equity share exchange ratio for the Proposed Transaction on the basis of appropriate weights and relative valuation of the Companies

Recommendation of Fair Equity Share Exchange Ratio

Dhwanit Kashyap Vaidya

Registered Valuer for Securities or Financial Assets
IBBI/RV/06/2019/11411

8. MAJOR FACTORS THAT WERE TAKEN INTO ACCOUNT DURING THE VALUATION

- 8.1.1. The equity shares of CEBBCO are frequently traded on a recognized stock exchange i.e. NSE during the twelve calendar months preceding the report date.
- 8.1.2. Key operating and financial parameters of the Companies vis-à-vis the comparable companies.

9. BASIS OF FAIR EQUITY SHARE EXCHANGE RATIO

- 9.1. The basis of the fair equity share exchange ratio for the Proposed Transaction would have to be determined after taking into consideration all the factors, approaches and methods considered appropriate. Though different values have been arrived at under each of the above approaches/ methods, for the purposes of recommending the Fair Equity Share Exchange Ratio it is necessary to arrive at a single value for the shares of the companies involved in a Proposed Transaction. It is however important to note that in doing so, we are not attempting to arrive at the absolute values of the shares of the Companies but at their relative values to facilitate the determination of a Fair Equity Share Exchange Ratio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each approach/ method.
- 9.2. In the ultimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuer and judgments taking into account all the relevant factors. There will always be several factors, e.g. quality of the management, present and prospective competition, yield on comparable securities and market sentiment, etc. which are not evident from the face of the balance sheets but which will strongly influence the worth of a share. This concept is also recognized in judicial decisions. There is, therefore, no indisputable single exchange ratio. While we have provided our recommendation of the Fair Equity Share Exchange Ratio based on the information available to us and within the scope and constraints of our engagement, others may have a different opinion as to the Fair Equity Share Exchange Ratio of the equity shares of JWL and CEBBCO. The final responsibility for the determination of the exchange ratio at which the Proposed Transaction shall take place will be with the Board of Directors of Companies who should take into account other factors such as their own assessment of the Proposed Transaction and input of other advisors.
- 9.3. We have been made to understand that the Companies have also appointed a firm of Chartered Accountants to determine Fair Equity Share Exchange Ratio. We have independently applied methods discussed above, as considered appropriate, and arrived at our assessment of the value per equity share of JWL and CEBBCO. To arrive at the consensus on the Fair Equity Share Exchange Ratio for the Proposed Transaction with the firm of Chartered Accountants, suitable minor adjustments/ rounding off have been done in the relative values.

- 9.4. In light of the above, and on a consideration of all the relevant factors and circumstances as discussed and outlined herein above, we recommend the following Fair Equity Share Exchange Ratio for the Proposed Transaction whose computation is as under:

Valuation Approach / Methodology	Jupiter Wagon Limited		Commercial Engineers & Body Builders Co. Limited	
	Valuer per Equity Share (INR)	Weights	Valuer per Equity Share (INR)	Weights
Cost Approach				
• Net Assets Value ^{Note 2}	NA	NA	NA	NA
Income Approach				
• Discounted Cash Flow Method	931.58	50%	16.01	50%
Market Approach				
• Market Price Method ^{Note 3}	NA	NA	15.94	50%
• Comparable Company Multiple Method ^{Note 4}	870.08	25%	NA	NA
• Comparable Company Transaction Method ^{Note 5}	785.67	25%	NA	NA
Relative Value per Equity Share	879.73		15.97	
Exchange Ratio (rounded-off)	100		5510	

Notes:

1. NA = Not Applicable/Not Adopted.
2. As mentioned in para 6.6 above, Cost Approach has not been considered since it does not reflect the intrinsic value of the business in a going concern scenario.
3. As mentioned in para 6.4.1 above, we have used market price method for CEBSCO as it is listed on NSE and BSE and record higher traded volume at NSE. Equity shares of JWL are not listed on any stock exchange and therefore this method could not be used for JWL.
4. As mentioned in para 6.4.2 above, we have considered EV/EBIDTA multiple under this method for valuation of equity shares of JWL. However, we could not use this method for valuing CEBSCO due to following reasons:
 - a. The trailing 12 months' EBIDTA of CEBSCO as on valuation measurement date is not stabilised and does not exhibit normalised level of operations, and
 - b. We could not identify any listed company in India which is operationally and financially comparable to "vehicle bodies manufacturing" segment of CEBSCO.
5. As mentioned in para 6.4.3 above, in case of JWL, we have used prior transaction value as JWL has recently issued equity shares to non-related party in an orderly transaction. However, we have not used this method for valuation of CEBSCO as we did not find comparable transactions in India, in recent past, for which adequate information was available in public domain and we did not consider it appropriate to use international transaction multiples due to lack of identical comparable companies/ transactions having variance on account size, geography, nature of business, nature of transactions, corporate structure, industry / company specific issues etc.

- 4.12. COVID-19 has impacted businesses all over the globe in an unprecedented way and adversely impacting short / medium term, liquidity, operations and growth. The tenure of pandemic and how individual businesses shall respond are uncertain as on valuation measurement date. The Companies have confirmed that the likely impact of Covid-19 has been factored in the projected cash flows provided. However, due to the unprecedented nature of the business and social turmoil and uncertainty of not only the tenure of pandemic but also the post Covid situation, TRC assumes no responsibility for the accuracy and completeness of overall impact considered by the Company in the projected cash flows and its consequent impact on the valuation.

5. Procedure Adopted

- 5.1. In connection with this exercise, we have adopted the following procedures to carry out the valuation:

- Requested and received financial information;
- Obtained data available in public domain;
- Undertook industry analysis such as researching publicly available market data including economic factors and industry trends that may impact the valuation;
- Detailed analysis of Comparable Companies for each business;
- Discussion with the management to understand the business and fundamental factors that could affect its earning-generating capability including strengths, weaknesses, opportunity and threats analysis and historical financial performance;
- Selection of valuation methodology/(ies) as per Indian Valuation Standards;
- Determined the fair equity share exchange swap ratio based on the selected methodology.

6. Valuation Approach

- 6.1. In accordance with Indian Valuation Standards 2018, ("Ind VS") issued by the Institute of Chartered Accountants of India, valuation in case of Proposed Transaction would require determining Fair Equity Share Exchange Ratio considering relative values of each company involved. These values are to be determined independently but on a relative basis, and without considering the effect of the merger.
- 6.2. The three main valuation approaches are the market approach, income approach and cost approach. There are various methods under these approaches which are commonly used for valuation purpose such as:

Under Market Approach, following methods are commonly used

- Market Price Method
- Comparable Companies Multiple (CCM) Method
- Comparable Transaction Multiple Method

Under Income Approach, following methods are commonly used

- Discounted Cash Flow (DCF) Method
- Relief from Royalty Method
- Multi-period Excess Earning Method
- With and Without Method
- Option Pricing Model

Commercial Engineers & Body Builders Co. Limited

Under Cost Approach, following methods are commonly used

- Replacement Cost Method
- Reproduction Cost Method

6.3. Market Approach is a valuation approach that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets, liabilities or a group of assets and liabilities, such as a business.

6.3.1. Market Price Method: The market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the trading of such shares. As per Regulation 164 (1) of Securities and Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations 2018 ('ICDR'), if the equity shares of the issuer have been listed on a recognised stock exchange for a period of twenty-six weeks or more as on the relevant date, the price of the equity shares to be allotted pursuant to the preferential issue shall be not less than higher of the following:

- 6.3.1.1. the average of the weekly high and low of the volume weighted average price of the related equity shares quoted on the recognised stock exchange during the twenty-six weeks preceding the relevant date; or
- 6.3.1.2. the average of the weekly high and low of the volume weighted average prices of the related equity shares quoted on a recognised stock exchange during the two weeks preceding the relevant date.

We have used market price method for CEBSCO as it is listed on NSE and BSE and record higher traded volume at NSE. Equity shares of JWL are not listed on any stock exchange and therefore this method could not be used for JWL.

6.3.2. Comparable Companies Multiple (CCM) Method involves valuing an asset based on market multiples derived from prices of market comparables traded on active market. We have considered EV/EBIDTA multiple under this method for valuation of equity shares of JWL. However, we could not use this method for valuing CEBSCO due to following reasons:

- 6.3.2.1. The trailing 12 months EBIDTA of CEBSCO as on valuation measurement date is not stabilised and does not exhibit normalised level of operation, and
- 6.3.2.2. We could not identify any listed company in India which is operationally and financially comparable to "vehicle bodies manufacturing" segment of CEBSCO.

6.3.3. Comparable Transaction Multiple (CTM) Method involves valuing an asset based on transaction multiples derived from prices paid in transactions of asset to be valued /market comparables (comparable transactions). Comparable transactions involving subject assets are sometimes referred to as prior transaction method. We have not used this method for current valuation of CEBSCO as we did not find comparable transactions in India, in recent past, for which adequate information was available in public domain and we did not consider it appropriate to use international transaction multiples due to lack of identical comparable companies/ transactions having variance on account size, geography, nature of business, nature of transactions, corporate structure, industry / company specific issues etc. Prior transaction method is used for valuation of JWL as JWL has recently issued equity shares to non-related party in an orderly transaction.

Commercial Engineers & Body Builders Co. Limited

- 6.4. **Income Approach:** This approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow (DCF) Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows. DCF method is considered the most theoretically sound, scientific and acceptable method for determination of the value of a business undertaking. Under this technique, the projected free cash flows from business operations are discounted at "Weighted Average Cost of Capital" to the providers of capital to the business. The sum of the discounted value of such free cash flows is the value of the business. We have considered it appropriate to apply the DCF Method under Income Approach, as data with respect to prospective financial information is available for both the Companies.
- 6.5. **Cost Approach:** It is a valuation approach that reflects the amount that would be required currently to replace the service capacity of an asset.
- 6.5.1. **Replacement Cost Method,** also known as 'Depreciated Replacement Cost Method' involves valuing an asset based on the cost that a market participant shall have to incur to recreate an asset with substantially the same utility (comparable utility) as that of the asset to be valued, adjusted for obsolescence.
- 6.5.2. **Reproduction Cost Method** involves valuing an asset based on the cost that a market participant shall have to incur to recreate a replica of the asset to be valued, adjusted for obsolescence.
- This valuation approach is mainly used in case where the assets base dominates earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, with the values arrived at on the net asset basis being of limited relevance. Therefore, Cost Approach has not been considered since it does not reflect the intrinsic value of the business in a "going concern scenario".
- 6.6. **Summary of valuation approached and methodologies used for valuation exercise is given below:**

Name of Company	Cost/Asset Approach	Income Approach	Market Approach		
		DCF	Market Price	CTM	CCM
CEBICO	x	✓	✓	x	x
JWL	x	✓	x	✓	✓
<i>Reference Note No.</i>	6.5	6.4	6.3.1	6.3.3	6.3.2

- 6.7. It should be understood that the valuation of any company or its assets is inherently subjective and is subject to uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the Companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, the conditions and prospects, financial and otherwise, of the companies/businesses, and other factors which generally influence the valuation of companies and their assets.

Commercial Engineers & Body Builders Co. Limited

6.8. The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of method of valuation has been arrived at using most appropriate methods adopted for transactions of a similar nature and our reasonable judgment, in an independent and bona fide manner based on our previous experience of assignments of similar nature.

7. Basis of Fair Equity Share Exchange Ratio

- 7.1. The basis of the fair equity share exchange ratio for the Proposed Transaction would have to be determined after taking into consideration all the factors, approaches and methods considered appropriate. Though different values have been arrived at under each of the above approaches/ methods, for the purposes of recommending the Fair Equity Share Exchange Ratio it is necessary to arrive at a single value for the shares of the companies involved in a Proposed Transaction. It is however important to note that in doing so, we are not attempting to arrive at the absolute values of the shares of the Companies but at their relative values to facilitate the determination of a Fair Equity Share Exchange Ratio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each approach/ method.
- 7.2. In the ultimate analysis, valuation will have to be arrived at by the exercise of judicious discretion by the valuer and judgments taking into account all the relevant factors. There will always be several factors, e.g. quality of the management, present and prospective competition, yield on comparable securities and market sentiment, etc. which are not evident from the face of the balance sheets but which will strongly influence the worth of a share. This concept is also recognized in judicial decisions. There is, therefore, no indisputable single exchange ratio. While we have provided our recommendation of the Fair Equity Share Exchange Ratio based on the information available to us and within the scope and constraints of our engagement, others may have a different opinion as to the Fair Equity Share Exchange Ratio of the equity shares of JWL and CEBBCO. The final responsibility for the determination of the exchange ratio at which the Proposed Transaction shall take place will be with the Board of Directors of Companies who should take into account other factors such as their own assessment of the Proposed Transaction and input of other advisors.
- 7.3. We have been made to understand that the Companies have also appointed a Registered Valuer to determine Fair Equity Share Exchange Ratio. We have independently applied methods discussed above, as considered appropriate, and arrived at our assessment of the value per equity share of JWL and CEBBCO. To arrive at the consensus on the Fair Equity Share Exchange Ratio for the Proposed Transaction with the registered valuer, suitable minor adjustments/ rounding off have been done in the relative values.
- 7.4. In light of the above, and on a consideration of all the relevant factors and circumstances as discussed and outlined herein above, we recommend the following Fair Equity Share Exchange Ratio for the Proposed Transaction whose computation is as under:

Independent Auditor's Report

To The Board of Director's of
JUPITER WAGONS LIMITED

Opinion

We have audited the accompanying interim financial statements of **JUPITER WAGONS LIMITED**, which comprise the Balance Sheet as at 31st December 2020, the Statement of Profit and Loss, and statement of cash flows for the nine months' period ended on 31st December 2020, and a summary of significant accounting policies and other explanatory information.

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid interim financial statements give the information required by the Companies Act, 2013 ('the Act') in the manner so required and give a true and fair view in conformity with the accounting principles generally accepted in India, including the AS-25, Interim Financial Reporting :

- (i) in the case of the balance sheet, of the state of affairs of the Company as at 31st December 2020; and
- (ii) in the case of the statement of profit and loss, of the profit for nine months' period ended on 31st December 2020.
- (iii) In the case of the cash flow statement, of the cash flows for nine months' period ended on 31st December 2020.

Responsibility of Management and those charged with governance for the Interim Financial Statements

The Company's Board of Directors is responsible for the preparation and fair presentation of these interim financial statements that give a true and fair view of the financial position, financial performance and cash flows of the Company in accordance with the accounting principles generally accepted in India, including the Accounting Standard (AS) 25, Interim Financial Reporting as specified under Section 133 of the Companies Act, 2013, read with Rule 7 of the Companies (Accounts) Rules, 2014. This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the Act for safeguarding of the assets of the Company and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and design, implementation and maintenance of adequate internal financial controls, that were operating effectively for ensuring the accuracy and completeness of the accounting records, relevant to the preparation and presentation of the interim financial statements that give a true and fair view and are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those Board of Directors are also responsible for overseeing the Company's financial reporting process.

Auditor's Responsibilities for the Audit of the Interim Financial Statements

Our objectives are to obtain reasonable assurance about whether the interim financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of the users taken on the basis of these financial statements.

//2//

As a part of our audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the interim financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the interim financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the interim financial statements, including the disclosures, and whether the interim financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

Materiality is the magnitude of misstatements in the interim financial statements that, individually, or in aggregate, makes it probable that the economic decisions of a reasonably knowledgeable user of the interim financial statements may be influenced. We consider quantitative materiality and qualitative factors in (i) planning the scope of our audit work and in evaluating the results of our work; and (ii) to evaluate the effect of any identified misstatements in the interim financial statements.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

VI. INTERNAL RISK FACTORS

The below mentioned risks are the top 8 internal risk factors:

- Our financial performance is particularly affected by interest rate volatility. Interest rates are sensitive to many factors beyond our control, including the monetary policies of the Reserve Bank of India, domestic and international economic and political conditions, inflation and other factors. Any fluctuations in the interest rates can adversely affect our borrowing costs, interest income and net interest margin, which can adversely affect results of our operations.
- The performance of our wagon manufacturing unit is heavily dependent on the policies of the Government of India. Any unfavorable change in the policies by the Government of India, especially the procurement policy of the Indian Railways or any policy granting special incentives to public sector wagon manufacturers, may have a material adverse effect on the Company.
- We face margin pressure as a large number of our supply contracts are awarded by our customers following competitive bidding processes and satisfaction of other prescribed pre-qualification criteria. Once the prospective bidders clear the technical requirements of the tender, the contract is usually awarded to the lowest bidder. We face competition from domestic and international companies, some of which operate on a smaller base than us and so may therefore be able to operate on lower overheads. In addition, new entrants to these industries may reduce their margins in order to gain market share. The nature of the bidding process may cause us and our competitors to lower prices for securing contracts, so as to maintain our respective market share. As a result of this competition, we may face substantial margin pressure, which may have a material adverse effect on our profitability.
- The Company's failure to maintain the quality standards of its services could adversely impact our business, results of operations and financial condition.
- The Company's revenue generation and profitability is heavily dependent on our wagon manufacturing division and since a significant portion of the overall revenue is contributed by the Indian Railways, any slowdown or delay in orders could affect our earnings negatively.

6. The decline of the Indian Railways' share in freight traffic compared to road transport has only recently been arrested. There is no assurance that this growth will continue. In the event, the recent growth in the Indian Railways is not sustained and freight traffic declines for various reasons, the overall requirement for wagons would decline, which may result in reduced orders and consequently could have a material adverse impact on our business and financial conditions.
7. Even though the railway contracts have price escalation clause based on price index system, any high fluctuation in raw material prices will have negative effect on the overall margin of the Company particularly executing wagon contract of private parties.
8. The Covid-19 pandemic and resultant lockdown has a moderate adverse effect on the performance of the Company in the first quarter of the financial year 2020-21. Any such recurrence or outbreak of similar pandemic may affect the future performance of the Company.
