Dear Sir/Madam,

**DroneAacharya Aerial Innovations Limited** is proud to unveil its newest environmental monitoring technology: the Drone-based Multi-Gas Sensing and Mapping System. This innovative system elevates air quality monitoring for industries, environmental agencies, and researchers, providing a complete solution for accurate data on air pollution distribution, identifying potential leakage spots, improving hazmat response, detecting fugitive emissions, monitoring ship emissions, and showcasing air pollutant vertical profiles through impressive 3D visualization.

This solution comes just in time as India's biggest metropolitan cities like Delhi and Mumbai struggle with depreciating air quality constituted majorly by paddy straw, power generation plants and dust. According to senior lung specialist from Medanta Hospital Dr Arvind Kumar, the severe air quality is equal to about 25–30 cigarettes in terms of damage to the body. Prolonged exposure to high levels of pollution can cause or worsen respiratory problems such as asthma, bronchitis, and chronic obstructive pulmonary disease (COPD) and can dramatically raise the risk of cardiovascular disease.

DroneAacharya's Multi-Gas Sensing and Mapping System is a game-changer for environmental care, safety, and smart decision-making. With real-time air quality data, this technology empowers industries, agencies, and researchers to make informed decisions and proactively contribute to a cleaner and safer environment.

We request you to kindly take note of the same.

Thanking you,  
Yours faithfully,

**For DroneAacharya Aerial Innovations Limited**
