- Describe the processes in place to safely reclaim your products for reusing, recycling and disposing at the end of life, for (a) Plastics (including packaging) (b) E-waste (c) Hazardous waste and (d) other waste.**

Not Applicable – Being an electricity generation company, there is limited scope for reclaiming of its products for further processing. Nonetheless, the company is constantly seeking out opportunities to recycle waste. Fresh water is used for generation of De-mineralized water, which is fed to boiler for generation of steam. The process of generating DM water causes wastewater generation. This is treated in neutralizing pits and the treated effluent is used for condenser makeup. The fresh water used for canteen and toilet purposes is treated through Sewage treatment plant and the treated effluent is used for development of green belt in and around the plant. Regular monitoring of the effluent parameter is being carried out by in-house laboratory. This ensures the efficacy of wastewater management and ensures that the systems are running properly.

The used oil waste, e-waste, plastic waste is recycled through authorized vendors at all locations.

All the Ash waste generated due to burning of coal is utilized inhouse or by cement manufacturers & other construction contractors for making of cement, bricks etc.

The hazardous waste sent to authorized recyclers in FY 2022-23 is 140.645 MT.
