Stergic Typhoid IgG/IgM Rapid Test

Royal Sense Limited is excited to announce the official launch of our latest Orthotics Care Product, the Stergic Typhoid IgG/IgM Rapid Test detects antibodies for typhoid fever, indicating current or past infection with quick, reliable results.

Here are some details you might find in a Stergic Typhoid IgG/IgM Rapid Test

The Typhoid IgG/IgM Rapid Test is a diagnostic tool designed to detect antibodies (IgG and IgM) against Salmonella typhi, the bacteria responsible for typhoid fever. It provides a quick and reliable way to determine if a person has a current or past infection. The test typically uses a fingerstick blood sample and delivers results in about 15-20 minutes. IgM antibodies indicate a recent or acute infection, while IgG antibodies suggest past exposure or a longer-term infection. This test is useful in areas with high typhoid incidence or for rapid screening in clinical settings. It's important to follow up with a healthcare provider for comprehensive diagnosis and treatment if the test is positive.

About Royal Sense Limited: Royal Sense Limited is a leading provider of innovative diagnostic solutions for healthcare professionals worldwide. With a focus on quality, reliability, and accessibility, we are dedicated to improving patient care and advancing the field of medical diagnostics.
