3.	Water Management	Risk	Water is a critical input in chemical production. Companies with water intensive operations face a greater risk of operational disruption due to water scarcity, which can also increase water procurement prices and capital expenditures. Similarly, chemical manufacturing generates process wastewater that must be treated before disposal. Non compliance with water quality regulations may result in regulatory compliance and mitigation costs.	As a responsible chemical manufacturing organization, we put a premium on the ability to moderate water consumption. We have upgraded our wastewater management by replacing normal wastewater treatment with new age technology. This replacement moderated water and power consumption, helping moderate environment impact and conserve natural resources. The company also invested various water conservation schemes, this water is further used in the cooling tower and for other processes.	Negative
4.	Handling of Hazardous Chemicals	Risk	Chemical company is responsible for managing all risks related to the storage and handling of hazardous chemicals. The improper handling of chemicals and spills can cause harm to the environment or humans and also imposes a heavy fine and reputational risk on the company.	Company ensures that hazardous materials are handled in a manner that mitigates risks to the environment, employees, and the community. In order to maintain the health & safety at workplace company conducts lot of internal and external health and safety audits. Also, the environmental and social parameters relevant are information is provided with the product. In case of hazardous waste, company ensure the waste is managed as per waste management rules and regulations.	Negative
5.	Waste Management	Risk	Typically, waste is generated as part of a company's operations, captive power plant, maintenance of machinery and office administrative work. Improper waste handling may contribute to air pollution, climate change, and various direct and indirect impacts on the ecosystem. It may also cause health and safety risks to personnel exposed to the waste. Non-compliance with waste management regulations may lead to the imposing of heavy fines.	The company replaced and switched to various new technology to reduce the waste generation. This replacement helped to reduce the consumption of a natural resource, reduced waste generation and waste disposal in open land. Additionally the company is taking of it's Plastic Waste generated by it's products and packaging responsibly.	Negative

5. Has the entity implemented a mechanism for Zero Liquid Discharge? If yes, provide details of its coverage and implementation.

Yes, our industry follows Zero Liquid Discharge Philosophy. Effluent generated from industry is segregated into High TDS & Low TDS effluent. The high TDS effluent is treated in MEE & Low TDS effluent is treated in RO Plant. The permeate separated after treatment is taken back into Process system through Cooling Tower make up & the Hazardous waste MEE sludge after drying is sent to PPCB approved TSDF facility @ Nimbua, for the safe treatment & disposal.

10. Briefly describe the waste management practices adopted in your establishments. Describe the strategy adopted by your company to reduce usage of hazardous and toxic chemicals in your products and processes and the practices adopted to manage such wastes.

Our industry follows Zero Liquid Discharge Philosophy. Effluent generated from industry is segregated into High TDS & Low TDS effluent. The high TDS effluent is treated in MEE & Low TDS effluent is treated in RO Plant. The permeate separated after treatment is taken back into Process system through Cooling Tower make up & the Hazardous waste MEE sludge after drying is sent to PPCB approved TSDF facility @ Nimbua, for the safe disposal.

The company has put in place several initiatives a) to reduce manufacturing rejects as part of the resource optimization and waste minimization process, and to b) to reduce generation of hazardous waste and toxic chemicals by source reduction through plant modifications, waste recovery, recycle or waste treatment through destruction.

3. With respect to the ecologically sensitive areas reported at Question 10 of Essential Indicators above, provide details of significant direct & indirect impact of the entity on biodiversity in such areas along-with prevention and remediation activities.

There is a total of 03 no of ecological sensitive areas located in 10km of radius around our industry premises i.e., Protected Forest, Wildlife Sanctuary, Wet Land.

Significant aspects that may cause environmental impacts are as follows:

- a) Fugitive emissions of Chlorine, Emissions of HCl & unabsorbed Cl2, Emissions of PM, SO2, NOx, Deposition of PM & SO2 on nearby area, Emissions due to venting of gases, Risk during venting of pressurised gas /liquid.
- b) Possibility of soil contamination due to improper disposal and/or transportation of solid and hazardous waste, Possibility of groundwater and soil contamination due to improper disposal/ storage of wastewater.
- c) Draining material mixed with groundwater and soil can cause damage to flora, fauna found in soil and Soil contamination and destruction of surrounding vegetation and associated biodiversity due to deposition of excess chlorine.

Prevention & Remediation Activities:

- Surface water quality will not be affected due to the industry as industry follows Zero Liquid Discharge policy (ZLD). Constant R & D is being done to Segregate the Effluent based on Quality i.e. High TDS & Low TDS & reduce the Quantity of Effluent generated. Accordingly Proper SOPs are in place for treatment of Waste Water. ZLD is achieved by recycling and reuse of treated wastewater from RO & MEE plant. Final hazardous solid waste generated is sent to PPCB approved Recycler and Permeate is pumped back to Process System.
- b) The concentration of the pollutants in the environment is maintained within the allowable limits as recommended by MOEF&CC, NAAQI and CPCB guidelines. Through PPCB & CPCB recommended APCD's, water scrubbers and Electrostatic precipitator, vegetation, and human settlements in the vicinity of industry is not likely to be affected. Provision of Caustic scrubbers for neutralisation of waste CI2 gas in the plant has been made. Standardized SOPs for critical operations are also followed. Industry has already taken adequate Safety measures to handle such like emergency situations by: Inbuilt Control mechanism in the Process operation system, Gas Detectors / Sensors at Critical / Hazardous locations in the plant to Monitor & initiate Safety Control mechanism to control / stop it's spread beyond the source of leakage and to Mitigate the Consequences of leakage, should it spread beyond the plant boundary. All such possible events & Worst case scenario leading to large scale spread of CI2 gas, have been postulated & effect thereof in terms of Dispersion in

the Air vis - a vis Dose & Distance to which it may effect, has been studied through Dispersion Modelling using ALOHA software. Sensors are also being installed at the plant boundary facing towards adjoining villagers to monitor & ensure that no Fugitive Cl2 escapes outside the plant.

4. If the entity has undertaken any specific initiatives or used innovative technology or solutions to improve resource efficiency, or reduce impact due to emissions /effluent discharge /waste generated, please provide details of the same as well as outcome of such initiatives, as per the following format:

Sr. No.	Initiative undertaken	Details of the initiative (web-link, if any, may be provided along-with summary)	Outcome of the Initiative
1.	Reusage of wastewater generated from IXC.	The wastewater generated recycled back into the process after chemical & resin treatment.	Dadward Land on DO horono
2.	Reusage of waste water generated from DM Plant.	The wastewater generated recycled back into the process after chemical & resin treatment.	Reduced load on RO by 90%.
3.	Reusage of process condensate in place of DM Water.	The process condensate generated during the whole process was recycled back to process.	This resulted in low DM Water Consumption and also the waste heat of process condensate recovered back.
4.	Green Belt development	Green belt is developed along & inside the premises, we have planted approx. 32000 plants.	This initiative improves our air quality.

5. Does the entity have a business continuity and disaster management plan? Give details in 100 words/ web link.

Yes, the industry has its 'On Site Emergency Plan' that covers all the possible Postulated Events / Scenario, such as leakage of gas from pipeline /valve, rupture of bullet and leakage of Chemicals along with their Risk Assessment, mitigation measures and their consequences. It also includes Emergency & First Aid Procedures with defined responsibilities of key personnel that must be followed during the emergency.

For ensuring the continuity in our business, we are preparing a document that outlines all the probable risks (social, financial, environmental, strategic risks) which have the potential to disrupt our business along with a comprehensive review of the mitigation measures that can immediately be implemented to smoothen the disturbances and ensure uninterrupted Continuity of our business.

6. Disclose any significant adverse impact to the environment, arising from the value chain of the entity. What mitigation or adaptation measures have been taken by the entity in this regard.
