Blockchain start-up Polygon raises ₹3.4k cr

Valued at \$10 bn in round led by Sequoia, Tiger Global; biggest for Web3 in India

DEEPEKHA CHOUHURY
Bengaluru, 7 February

Blockchain start-up Polygon has raised \$450 million (around ₹3,400 crore) at a valuation of around \$10 billion, making it the biggest funding round in the Web3 (crypto and blockchain) space in India, and one with the highest valuation.

The funding was raised through a private sale of its native MATIC token in a funding round led by Sequoia Capital India with participation from SoftBank, Tiger Global, and others.

Polygon is an Ethereum scaling platform that enables developers to build scalable DApps (decentralised apps) with low transaction fees without sacrificing on security. Jaynti Kanani, Sandeep Nalwal, and Anurag Arjun co-founded Polygon (formerly Matic) in 2017 to solve the problem of high fees and slow transactions on the Ethereum blockchain.

The current market capitalisation of Matic, which is the native crypto token of Polygon, is \$14.6 billion—down 28 per cent from its lifetime high of \$20.4 billion, which it hit in December 2021.

Web3 builds on the early Internet's open-source ideals, enabling users to create the value, control the

network and reap the rewards. Ethereum, scaled by Polygon, will be the bedrock of this next stage in the Web3 evolution," said Polygon co-founder Sandeep Nalwal. "Technological disruption didn't start with Web2, nor is it going to end there. That's why we are very excited to see some of the past first and then tackle applications around privacy. "The platform of choice to build on the blockchain today is Polygon. Thousands of developers across a range of applications are choosing Polygon and their complete set of scaling solutions for the Ethereum ecosystem," said Shalesh Lakshani, managing director of Sequoia India. "This is an ambitious and aggressive team, one that values innovation at its core. Sequoia

Capital India is thrilled to lead this significant financing round. "With this war chest, the core team can secure Polygon's lead in paving the way for mass adoption of Web3 applications, a race that we believe will result in Ethereum prevailing over alternative blockchains. The funds will also allow Polygon to continue investing in cutting-edge zero knowledge (ZK) technology that will be key to onboarding the next billion users to Web3," the company said.

Impressive as that roster is, Polygon has always been a community-first project and owes its success to the ecosystem of early believers, developers and stakeholders. This will not change. The core team sees this investment round as the tide that lifts all boats and a testament to the importance of community in making Web3 a reality," it added.

Ethereum's most pressing question is how to increase the network's capacity to handle more transactions. The skyrocketing popularity of new applications in decentralised finance (DeFi) and non-fungible tokens (NFTs) brought with it congestion and soaring fees. Polygon has stepped in with a broad range of scaling options and transaction rates that are among the industry's lowest.

Delhi HC gives interim relief to Google subsidiary

INDOVA DHASMANA
New Delhi, 7 February

The Delhi high court (HC) has given an interim relief to a Singapore-based subsidiary of Google in its tax dispute with tax authorities in India.

The Court has allowed Google Asia Pacific Pte Ltd to receive payments to the tune of \$110.61 crore from Google Cloud India after

withholding tax of eight per cent. Inclusive of surcharge and cess, for the assessment year 2022-23.

The tax department was asking for ten per cent tax after the company applied for a certificate for paying zero per cent tax.

However, Google Asia Pacific filed a petition in the HC stating that there should not be any withholding tax on its payments from Google

cent equalisation levy. The HC's ruling is an interim measure and it posted for the matter to be heard in May. Sandeep Sehgal, partner tax at AKM Global, said, "Such confusion is expected till the time equalisation levy is in place. Google Cloud Services could be considered a case for applicability of EL and may not be subject to withholding."

BARC to resume news channels' ratings starting mid-March

PRESS TRUST OF INDIA
Mumbai, 7 February

TV ratings body Broadcast Audience Research Council (BARC) on Monday said it will be restarting issuing data on news channels from mid-March, over 17 months after suspending it.

In a statement, BARC said the union ministry of information and broadcasting has given a directive to resume the release of data for individual news channels. "BARC India is currently working towards ensuring the seamless release of individual news channel data and intends to commence release with effect from our reporting week 10, 2022, for our reporting cycle," the data was first released to the market on Thursday 17th March 2022," the statement said.

The Broadcast Audience Research Council (BARC) had in October 2020 "temporarily suspended" the ratings on the news genre following a "cash for ratings" scam allegedly involving top executives from Republic TV.

The audience estimates given by BARC influence ad spends. The total size of big ad placements was pegged at ₹2,000 crore annually by the Mumbai Police, which had arrested a slew of people in connection with the case. The police alleged the ratings were being rigged by inducing the homes where the monitors were placed.

The data will be released as per the Augmented Data Reporting Standards for News and Special Interest genres. BARC said, adding that clients and stakeholders have been communicated about the same.

The Augmented Standards entail the reporting of audience estimates for News and Special Interest genre channels on a four-week rolling average basis, which will be released regularly every week along with the estimates for all other channels. All viewership data will be published on the same YUMI platform that all its subscribers use, the statement said. "We believe we have a statistically sound and effective solution which helps augment the robustness of the data and reporting, which we had set out to do," it added.
