Tata Elxsi Collaborates with Red Hat to Accelerate Network Monetization for Telcos

Strategic alliance for 5G Network Monetization with vertically integrated solutions and Smart OpEx reduction

Bengaluru, June 13, 2024: Tata Elxsi, a global engineering and design services company, today announced its collaboration with Red Hat, the world's leading provider of enterprise open-source solutions to monetise applications and reduce operational expenditures through simplifying operations in 5G networks for Telcos and enterprises.

Accelerating 5G Monetization

The collaboration aims to create a use case factory to help global operators monetize their networks using industry specific 5G applications across transportation, manufacturing, healthcare, through proven verticalized applications and joint solutions.

As a case in point, as the automotive industry aggressively pivots towards software-defined vehicles (SDV), there is a growing demand for real time, secure OTA (over-the-air) updates and containerized services through 5G networks. The collaboration enables telcos to address these OEM needs with an integrated solution using TETHER, Tata Elxsi's globally deployed connected vehicle platform; NEURON, Tata Elxsi's award-winning network automation platform, Red Hat OpenShift, the industry's leading hybrid cloud application platform powered by Kubernetes, along with Red Hat In-Vehicle Operating System. This solution will enable OEMs to deploy subscription-based services and platforms for connected vehicles with advanced fleet management features and realtime OTA.

Network OpEx reduction

By harnessing the powerful synergy between Tata Elxsi NEURON and Red Hat OpenShift, telcos can experience a transformative shift towards seamless automation, cloud integration, service orchestration, and robust assurance. This integration not only streamlines operations but also drives a substantial reduction in operational expenditure, paving the way for enhanced efficiency and profitability in the telecom industry.

NEURON, Tata Elxsi's award winning solution, streamlines the lifecycle management of network elements, offers end-to-end orchestration for network deployments, leverages AI-powered observability for proactive monitoring, and automates tasks for streamlined and secure network operations.

Vivek Tiwary, Vice President and Head of Telco 5G Business Tata Elxsi said "As we enter the era of 5G in automotive, healthcare, and Industry 4.0, telcos are at the forefront, crafting customer-centric services and embracing new technologies. This shift demands a move towards cloudification, multi-cloud adoption, intelligent cognitive network operations and automation. We are delighted to enable

this transition alongside Red Hat, driving Telco 5G Multi Cloud Automation and edge intelligence to provide our clients with unique services."

"Collaborating with Tata Elxsi, we are excited to leverage Red Hat OpenShift to provide telcos with enhanced monetization opportunities. This work is a testament to our commitment to delivering innovative solutions that drive growth and efficiency in the telecom sector." Mark Longwell, director, telco and edge alliances, Red Hat

About Tata Elxsi

Tata Elxsi is a global design and technology services company that helps customers across automotive, consumer electronics, healthcare, media and telecom industries, reimagine their products and services through design thinking and the application of digital technologies. Tata Elxsi brings together industry-leading solutions and platforms and deep domain capabilities in 5G network design, automation, orchestration and digital engineering for global telcos and enterprises. Customers can leverage the 5G A^3 Innovation Lab in Bangalore as a use case foundry for Applications, Automation and AI in 5G networks.
