

Evosys and Solix Technologies Partner to Deliver Enterprise Data Management as a Service

Collaborative platform helps clients deploy policy-based data governance strategies, manage on-premise data and transition to cloud-based infrastructure

Dubai, UAE; Santa Clara, CA – December 02, 2013: [Evolutionary Systems Arabia Fz LLC](#) (Evosys), a recognized innovator in enterprise IT software solutions, today announced a partnership with [Solix Technologies](#), a leading provider of [enterprise data management \(EDM\)](#) solutions, to offer customers a comprehensive information lifecycle (ILM) solution to manage both structured and unstructured data. By providing clients with a platform to deploy policy-based data governance strategies, the Evosys-Solix partnership helps organizations not only manage on-premise data, but transition to cloud-based infrastructure as well.

Research reveals the volume of business data to be stored is growing at a rate of 40 to 60 percent each year. With most of the IT budget going into the maintenance of the storage, organizations are facing the challenging task of managing data growth by improving application performance, reducing downtime.

Evosys is expanding its Data and Information Management Suite to manage both structured and unstructured data as part of its commitment in helping customers automate and simplify the management of complex IT environments, reduce risk and improve service delivery throughout the IT lifecycle. The partnership with Solix Technologies is an excellent complement to Evosys for its backup and archiving solutions.

The partnership with Solix will strengthen the data management solutions of Evosys by providing customers with database archiving, data masking, test data management, and application retirement solutions for packaged as well as custom database applications. Availing these best-in-class enterprise data management solutions, organizations can:

- Improve application performance
- Reduce maintenance costs
- Mask and protect sensitive test data
- Create database subsets and clones
- Decommission legacy applications
- Archive and access data based on compliance and regulations

Spending
