BEML launched Versatile Excavator BE220G

BEML has launched a robust and high performance excavator BE220G recently. This equipment is fitted with ergonomically designed cabin for operator comfort and excellent around visibility. The console is provided with state-of-the-art LCD display which constantly monitors all the vital parameters which prevents the minor problems becoming major ones. The operating weight of the excavator is 22800 Kg, powered by 4-stroke, turbo charged, water cooled, direct injection engine with gross power of 110 KW @2100 rpm.

BE220G excavator is provided with positive control hydraulics for smooth & effective combined operations, resulting in higher profitability and low operating costs. The features such as least swing radius, travel drive with built-in counter balance valve, swing drive with shockless valve and parking brake results in smooth swing and travel functions, thus improving the operator efficiency.

To meet various applications, this model of excavator is offered with FOPS, super 40 ft. and 60 ft. super long front attachments of different arm bucket combinations, Clamp Shell, Rock Breaker, Grappler, Auto Lubrication System and Auto-Fire Detection & suppression system as optional. AC is also offered as optional for improved operator comfort.

These attachments and systems make BE220G excavator a versatile machine to handle tough working conditions.
