

Aurionpro Signs Strategic Agreement with ForgeRock, Strengthens Enterprise Security Practice

Partnership to help clients secure their enterprises with best-in-class identity management solutions

June 17, 2015, San Ramon, CA, MARKETWIRE

Aurionpro, a global leader in providing enterprise-scale security solutions to global corporations, today signed a strategic partnership with ForgeRock®, the leading open platform provider of identity management solutions. Under the partnership, Aurionpro will be a systems integrator covering all products within the ForgeRock Identity Platform™ portfolio– OpenAM (Access Management), OpenIDM (Identity Management), OpenIG (Identity Gateway), and OpenDJ (Directory Services).

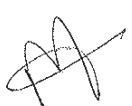

Aurionpro will now offer clients access management, fine-grained entitlements and application programming interface (API) gateway-based solutions based on the ForgeRock platform to help them secure their enterprises.

"At Aurionpro, we've built a reputation of being able to help clients secure their enterprises while accelerating digital innovation. We're rapidly expanding our ability to create customer-centric identity solutions with leading technology providers, and this agreement with ForgeRock is very strategic," said Ed Jackoviak, executive vice president, sales, North America, "We look forward to working with ForgeRock to help clients enable themselves with world-class identity and access-management systems."

Securing the Digital Wave

Globally digital transformation is reshaping businesses, and this trend is forcing newer workflows and processes that require cloud and social platforms to work with on-premise applications. The API economy is changing the way businesses are trying to monetize their offerings, and technology is enabling businesses to reach out to a larger audience. In turn, businesses need to be ready to manage large volumes of data securely. The Internet of things (IoT) is leading to an explosion of business opportunities that can be tapped if technology can provide a safe and secure mode of interaction. Given this context, enterprise security and identity management have acquired a whole new meaning, as identities now have to work seamlessly across hybrid IT environments that include cloud and on-premises solutions.

ForgeRock offers open-source flexibility with unparalleled scale and breadth. Aurionpro, with its ability to design and deliver enterprise-scale security solutions, has a 15-year track record of deep domain expertise and serves 30 million identities.

"This partnership is further evidence of growing enterprise interest in shifting away from traditional identity management solutions that were originally built only for managing employee identities, and toward more customer-centric identity solutions," said Rich Link, vice president of business development, Americas, ForgeRock. "We

“Look forward to collaborating with Aurionpro to expand the rapidly growing market of identity management.”
