Solix Announces Common Data Platform for Enterprise Data Management

Leading provider of enterprise archiving and data lake on Apache Hadoop enables advanced analytics for data-driven organizations.

June 28, 2016 — Santa Clara, Calif. — Solix Technologies, Inc., the leading provider of enterprise archiving and data lake solutions for Apache Hadoop, announced today the Solix Common Data Platform (CDP), a uniform data collection system for structured and unstructured data featuring low-cost data storage and advanced analytics.

The Solix Common Data Platform enables data-driven organizations to gain more value from their data because data can be visualized in more specific ways. Enterprise data warehouse provides a canonical, top-down view of enterprise data to meet end user requirements, but those views rarely satisfy the function specific requirements of data-driven applications. Enterprise data lakes store data "as-is" to minimize costly ETL processing and feed downstream NOSQL and analytics applications with data to be better described later, when it is needed. Text search and structured query enables universal access to all data.

"The Solix Common Data Platform enables the data-driven enterprise by collecting structured and unstructured data in a single low-cost data repository for advanced analytics across the enterprise," said Sai Gundavelli, Founder and CEO of Solix Technologies, Inc.,

Gartner stated in its 09 December 2015 *"Predicts 2016: Information Strategy"* report:

"By 2020, 10% of organizations will have a highly profitable business unit specifically for productizing and commercializing their information assets."

Key benefits of the Solix Common Data Platform include:

- Solix Big Data Suite
- Solix Object Workbench
- Solix Analyst Workbench
- Information Lifecycle Management

SOLIX

- Data Governance
- Data Security
- Apache Hadoop
