Solix Adds Object Workbench, Data Governance Workbench, Analyst Workbench, and API support to Solix Common Data Platform

Real-time enterprise archiving and data lake supports ILM and GDPR compliance.

October 31, 2017 — Santa Clara, California – Solix Technologies, Inc. (www.solix.com), a leading big data application provider for empowering data-driven enterprises, today announced Object Workbench, Data Governance Workbench, and Analyst Workbenches for the Solix Common Data Platform (CDP). In addition, Solix has released CDP API 1.0, enabling certified third-party app store access.

CDP users are able to define data in more specific ways. ERP and enterprise data warehouses are limited to structured data sources that provide a canonical, top-down view of enterprise data which may not always satisfy data-driven requirements. By storing enterprise data “as-is”, CDPs reduce costly ETL operations and stage data for “schema-on-read” NOSQL and advanced analytics applications.

The Solix CDP is cloud ready software. Key capabilities include:

- **Object Workbench:** Uniform data collection of structured and unstructured data, ETL and metadata repository.
- **Data Governance Workbench:** Sensitive data discovery, data masking and encryption, role based access control, retention management, ILM, GDPR, PHI, PCI and FISMA compliance frameworks
- **Analyst Workbench:** Data preparation, data visualization, search, business intelligence and analytics
- **Enterprise archiving and data lake:** Real-time data hub architecture for scalable processing with low cost bulk data storage
- **CDP API 1.0:** Certified API support for Solix App Store solutions
- **S3 storage support:** API support for Amazon S3 (Simple Storage Service).

“The Solix Common Data Platform is an application framework for the data-driven enterprise”, said John Ottman, Executive Chairman at Solix Technologies, Inc. “Just as ERP measured financial information better, CDP measures all enterprise data better, regardless of format or source.”
