---	---

Dear Sir/Madam,

Subject : Submission of copy of published consolidated unaudited quarterly financial results for the 2nd quarter and half year ended 30th September, 2018

Reference : ISIN - INE337M01013; Scrip ID-533676; Scrip Code-INDOTHAI

With reference to the above cited subject, we are enclosing herewith copies of the advertisement published in today's newspapers - Choutha Sansar (Hindi Regional Newspaper) and Free Press (English National Daily Newspaper), regarding consolidated unaudited quarterly financial results for the 2nd quarter and half year ended 30th September, 2018.

This is for your information and record.

Thanking you,

Yours truly,

For Indo Thai Securities Limited

Sanjay Kushwah
(Company Secretary cum Compliance Officer)
Membership No: A49437

Global warming never stopped in last hundred years

Beijing: Global warming has never stopped in the past hundred years, with maximum rate of change occurring after Second World War II, according to a study. "Our study suggests that future climate conditions will likely rely on competition between multidecadal cooling and global warming if the multidecadal climate cycle repeats," said Xingang Dai from the Chinese Academy of Sciences. Global warming has been attributed to persistent increases in atmospheric greenhouse gasses (GHGs), especially in CO₂, since 1870, the beginning of the Industrial Revolution, according to the study published in the journal *Scientific Reports*.

Purple bacteria
can make
green fuel from
wastewater

AGENCIES/ London

A purple bacteria — which store energy from light — can help harvest hydrogen fuel from sewage, and recover carbon from any type of organic waste, scientists have found. Organic compounds in household sewage and industrial wastewater are a rich potential source of energy, bioplastics and even proteins for animal feed—but without an efficient extraction method, treatment plants discard them as contaminants.

A study, published in the journal *Frontiers in Energy Research*, is the first to show that supplying electric current to purple phototrophic bacteria can recover nearly 100 per cent of carbon from any type of organic waste, while generating hydrogen gas for electricity production. "One of the most important problems of current wastewater treatment plants is high carbon emissions," said Daniel Puyol of King Juan Carlos University in Spain.

Purple phototrophic bacteria capture energy from sunlight using a variety of pigments, which turn them shades of orange, red or brown — as well as purple. "Purple phototrophic bacteria make an ideal tool for resource recovery from organic waste, thanks to their highly diverse metabolism," said Puyol.

The bacteria can use organic molecules and nitrogen gas — instead of carbon dioxide and water — to provide carbon, electrons and nitrogen for photosynthesis. This means that they grow faster than alternative phototrophic bacteria and algae, and can generate hydrogen gas, proteins or a type of biodegradable polyester as byproducts of metabolism.

This new study is one of the first to compare sleep-inter-

BEWARE! FACEBOOK CAN MAKE YOU AN ALCOHOLIC

A study found that reading positive comments on social media encourages youngsters to drink

AGENCIES
Washington

Alcohol advertisements on social media sites such as Facebook can encourage young adults to drink, especially if such content is followed by positive comments from users, a study has found. Social media users who view alcohol ads are also more likely to "Like" or "Share" an ad when it has pro-drinking comments, according to the study published in the *Journal of Studies on Alcohol and Drugs*.

"There is more information on social media than just a post or a message. We are exposed to how other users respond to a post, and it is those responses that can influence your desire to drink," said Jonathan Noel,

from University of Connecticut in the US. "Our findings suggest that comments left by other social media users may either reinforce or negate the message from a post," said Noel. With hundreds of corporate-sponsored alcohol ads on social media sites, plus millions of views of alcohol ads on

YouTube, alcohol companies have expanded platforms to reach young consumers. The study suggests that the industry needs to improve the voluntary self-regulatory system that governs its advertising, possibly by limiting or banning comments on social media advertising. The research involved 120

young adults, ages 21 to 24, living in the US. Each participant viewed four online ads posted on Facebook.

The researchers then chose certain comments that would appear with the ads — either pro-drinking comments that had accompanied that ad online or anti-drinking comments, ads with pro-drinking comments left participants more than twice as likely to say they would Like or Share the ad.

"It's fascinating really. Not only might these comments influence the desire to drink, but they also can increase the reach and virality of the original message," said Noel. Overall, though, it wasn't the number of Likes, Shares, and Comments that appeared to influence the participants but the type of comments, researchers said.

Portable purifiers may shield your heart from toxic air

WASHINGTON: Using low-cost indoor air purifiers may help protect at-risk people from the adverse health effects of air pollution, a study claims. Microscopic particles floating in the air we breathe come from sources such as fossil fuel combustion, fires, cigarettes and vehicles, said researchers from the University of Michigan in the US. Known as fine particulate matter, this form of air pollution increases the risk of cardiovascular and other serious health problems, they said. The study, published in the journal *JAMA Internal Medicine*, found three days of using a low-cost air purifier at home significantly lowered urban seniors' fine particulate matter exposure.

Surgical menopause ups insomnia risk

AGENCIES
London

According to a latest study, surgical menopause leads to increased sleep issues in women as opposed to natural menopause. Surgical menopause is often accompanied by more psychological and physical difficulties.

The increased severity of menopause symptoms such as hot flashes and night sweats can disrupt sleep during a time in a woman's life when sleep problems are already an issue; however, only a few quantitative studies have investigated sleep-interfering behaviour in postmenopausal women.

This new study is one of the first to compare sleep-inter-

fering behaviours based on the type of menopause, surgical and natural.

More than 500 postmenopausal women completed questionnaires as part of the study. Women in the surgical menopause group reported significantly worse sleep quality, especially for sleep duration and habitual sleep efficiency compared with women in the natural menopause group. In addition, women who underwent surgical menopause were found to be more than twice as likely to have insomnia.

Furthermore, those women in the surgical menopause group who displayed more sleep-interfering behaviours had a higher severity of insomnia symptoms.

We are actually better at remembering names than faces, according to a study. Researchers from the University of York in the UK suggest that when we castigate ourselves for forgetting someone's name we are placing unfair demands on our brains.

Remembering a person's face in this situation relies on recognition, but remembering their name is a matter of recall, according to the study published in the *Quarterly Journal of Experimental Psychology*.

It is already well-established that human beings are much better at the for-

mer than the latter, the researchers said. They also point out that we only become aware that we have forgotten a name when we have already recognised the face.

"We rarely have to confront the problem of knowing a name, but not a face — remaining blissfully unaware of the countless faces we should recognise, but walk straight past on the street," researchers said.

For the study, the researchers designed a "fair test," pitting names against faces on a level playing field. They set up an experiment to place equal demands on the ability of participants to remember faces and names by testing both in a game of recognition.

The results showed participants scored consistently higher at remembering names than faces — recognising as little as 64 per cent of faces and up to 83 per cent of names in the tests.

"Our study suggests that, while many people may be bad at remembering names, they are likely to be even worse at remembering faces," said Rob Jenkins, from the University of York.

This Indian meditation practice can ward off Alzheimer's

AGENCIES
Washington

Kirtan Kriya—an ancient Indian meditation technique — may help improve brain function and memory in older adults at risk of Alzheimer's disease, a study has found. Researchers from West Virginia University in the US found that the simple meditative practice or musical therapy may alter certain biomarkers of cellular ageing and Alzheimer's Disease in older adults who are experiencing memory loss.

The study published in the *Journal of Alzheimer's Disease*, suggest these changes may be directly related to improvements in memory and cognition, sleep, mood, and quality of life. Sixty older adults with subjective cognitive decline (SCD), a condition that may represent a preclinical stage of Alzheimer's disease participated in the clinical trial.

While SCD has been linked to increased risk for dementia and associated with certain neuropathological changes implicated in Alzheimer's disease development, including elevated brain levels of beta amyloid, this pre-

PIC BIZLEWAN24INFO

clinical period may also provide a critical window for therapeutic intervention.

In the trial, each participant was randomly assigned to either a beginner meditation called *Kirtan Kriya* or music listening program and asked to practice 12 minutes per day for 12 weeks. *Kirtan Kriya* is a type of meditation practiced for thousands of years, which involves singing along with repetitive finger movements.

At baseline and 3 months, blood samples were collected. Two markers of cellular aging were measured: telomere length and telomerase activity.

Blood levels of specific beta-amyloid peptides commonly linked to Alzheimer's Disease were also assessed. In addition, memory and cognitive function, stress, sleep, mood, and quality of life were measured. All participants were followed for a total of 6 months.

Following completion of the 3-month intervention period, the meditation group showed significantly greater increases in a key beta amyloid peptide than the music group. Rising beta amyloid levels were correlated with improvements in memory and cognitive function, as well as with those in mood, sleep, and quality of life at both 3 and 6 months; these positive associations were substantially more pronounced in the meditation group.

Telomerase activity rose in both the meditation and music groups, although the increases were significant only among participants who had lower values at baseline, and who practiced more frequently over the course of the intervention. Likewise, increases in telomere length were also significantly greater among participants with lower values at the beginning of the study.

In addition, both groups improved significantly in memory and cognitive function, as well as in sleep and psychological status, although improvements in stress, mood, and quality of life were substantially greater in the meditation group.

Human lifespan continuing to increase

AGENCIES/ Boston

The human lifespan is increasing by approximately three years every generation — a trend likely to continue, a Stanford study has found. Researchers analysed life expectancy data from the past 50 years and found that people who survive to age 65 are continuing to live longer than their parents.

Previous research has suggested that humans were approaching the limit to their longevity. "The data shows that we can expect longer lives and there's no sign of a slowdown in this trend," said Shripad Tuljapurkar, a professor at Stanford University in the US.

"There's not a limit to life that we can see, so what we can say for sure is that it's not close enough that we can see the effect," he said. The study, published in the journal *PNAS*, looked at birth and death data for people above age 65 from 1960-2010.

The researchers found that the average age of death in those who live to be older than 65 increased by three years in every 25-year period, which means that people can expect to live about six years longer than their grandparents, on average.
